## I. WELCOME

Thank you for downloading our theme. We hope to guide you through all the aspects of the theme installation and the theme setup within this document. But if you have any questions that are beyond the scope of this documentation, please feel free to contact us.

*\*Mixedshop is compatible with PrestaShop 1.6.x*

## II. SERVER REQUIREMENTS

### PHP configuration:

- "memory\_limit" need to be at least "64M"
- "upload\_max\_filesize" need to be at least "16M"
- "allow\_url\_fopen" need to be set to "on"
- "register\_global" should be set to "off"
- "safe\_mode" should be set to "off"

### Extensions required:

- GD
- cURL
- SimpleXML
- SOAP

### File permissions:

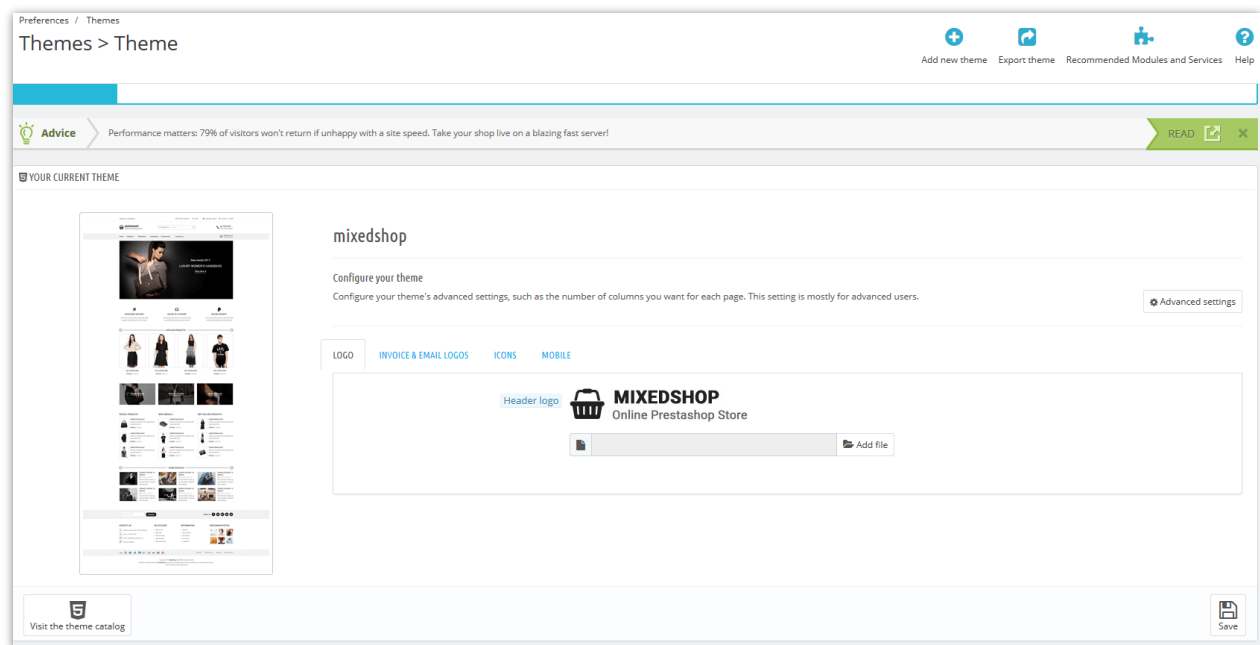

- All files need to be "664"
- All folders need to be "755"

### III. INSTALLATION

#### 1. Upload theme

Follow these steps to install our theme manually:

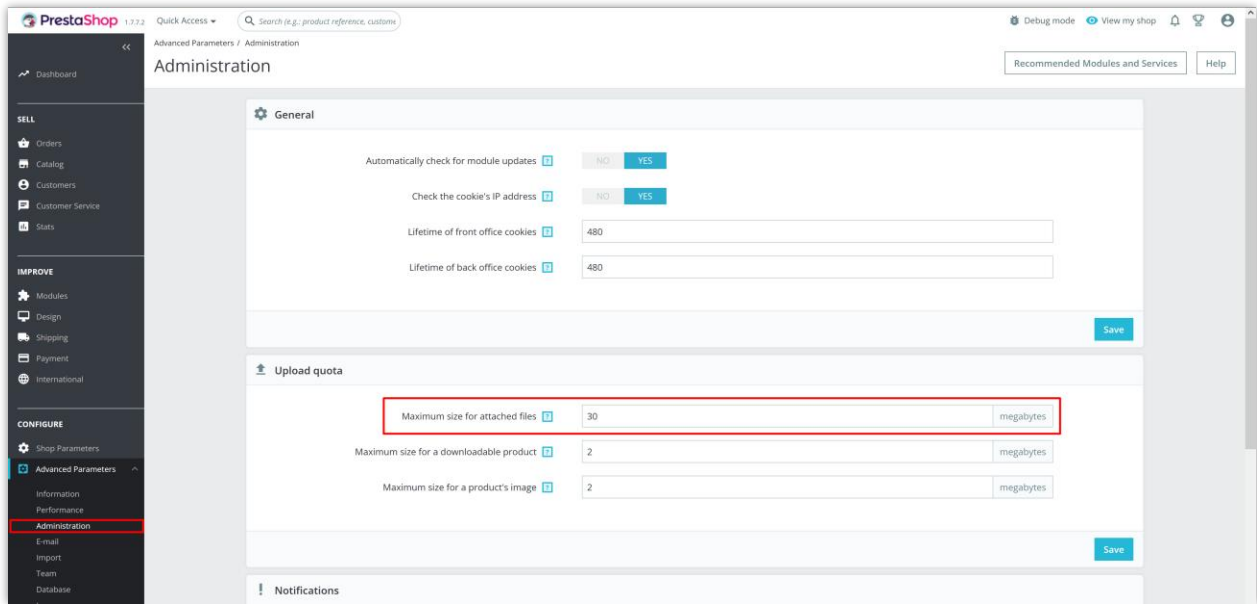

- Login to your back office and navigate to **Preferences > Themes** and click on **“Add new theme”**.
- Choose your theme file (**mixedshop.zip**) from the **“theme”** folder in the download file and click **“Save”**.
- Select and upload your website logo
- Choose the theme you uploaded and click **“Use this theme”**.

#### **NOTE:**

- Since the install package is larger than 2MB, therefore you should increase the **“Maximum size for attached files”** value of your site (**“Configure” > “Advanced Parameters” > “Administration”** page). We recommend the minimum value of 30 MB.

- After successfully uploading the install package, you can change this parameter back to the initial value.
- You can also contact the host manager to increase the "max\_upload\_filesize" value of your server to be able to upload larger file.

## 2. Image

Make sure your image sizes are configured as below:

ID	Name	Width	Height	Products	Categories	Manufacturers	Suppliers	Stores	
10	cart_default	80 px	107 px	✓	✗	✗	✗	✓	Edit
11	small_default	98 px	131 px	✓	✗	✓	✓	✓	Edit
12	medium_default	125 px	167 px	✓	✓	✓	✓	✓	Edit
13	home_default	250 px	333 px	✓	✗	✗	✗	✓	Edit
14	large_default	458 px	611 px	✓	✗	✓	✓	✓	Edit
15	thickbox_default	800 px	1067 px	✓	✗	✗	✗	✓	Edit
16	category_default	870 px	217 px	✗	✓	✗	✗	✓	Edit
17	scene_default	870 px	270 px	✗	✗	✗	✗	✓	Edit
18	m_scene_default	161 px	58 px	✗	✗	✗	✗	✓	Edit

Set up image quality that you prefer to use on your website:

**IMAGES GENERATION OPTIONS**

**?** JPEG images have a small file size and standard quality. PNG images have a larger file size, a higher quality and support transparency. Note that in all cases the image files will have the .jpg extension.  
 WARNING: This feature may not be compatible with your theme, or with some of your modules. In particular, PNG mode is not compatible with the Watermark module. If you encounter any issues, turn it off by selecting "Use JPEG".

Image format  Use JPEG.  
 Use PNG only if the base image is in PNG format.  
 Use PNG for all images.

\* JPEG compression: 90

\* PNG compression: 7

Generate images based on one side of the source image: Automatic (longest side)

\* Maximum file size of product customization pictures: 8388608 bytes

\* Product picture width: 64 pixels

\* Product picture height: 64 pixels

Generate high resolution images:  YES  NO  
*Enable to optimize the display of your images on high pixel density screens.*

Save

Regenerate image thumbnails:

**REGENERATE THUMBNAILS**

**?** Regenerates thumbnails for all existing Images  
 Please be patient. This can take several minutes.  
 Be careful! Manually uploaded thumbnails will be erased and replaced by automatically generated thumbnails.

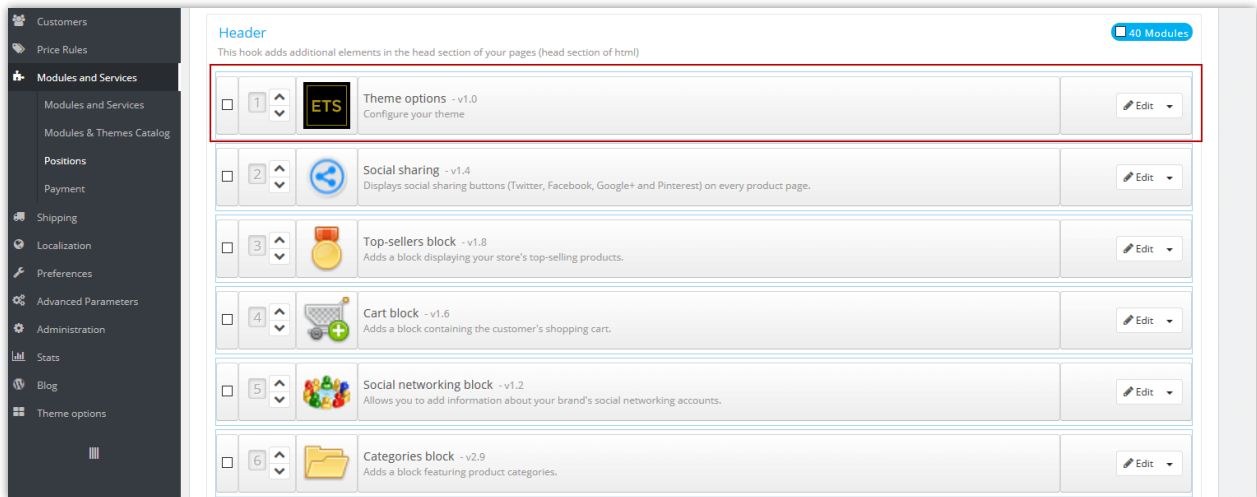

Select an image: All

Erase previous images:  YES  NO  
*Select "No" only if your server timed out and you need to resume the regeneration.*

Regenerate thumbnails

### 3. Module positions

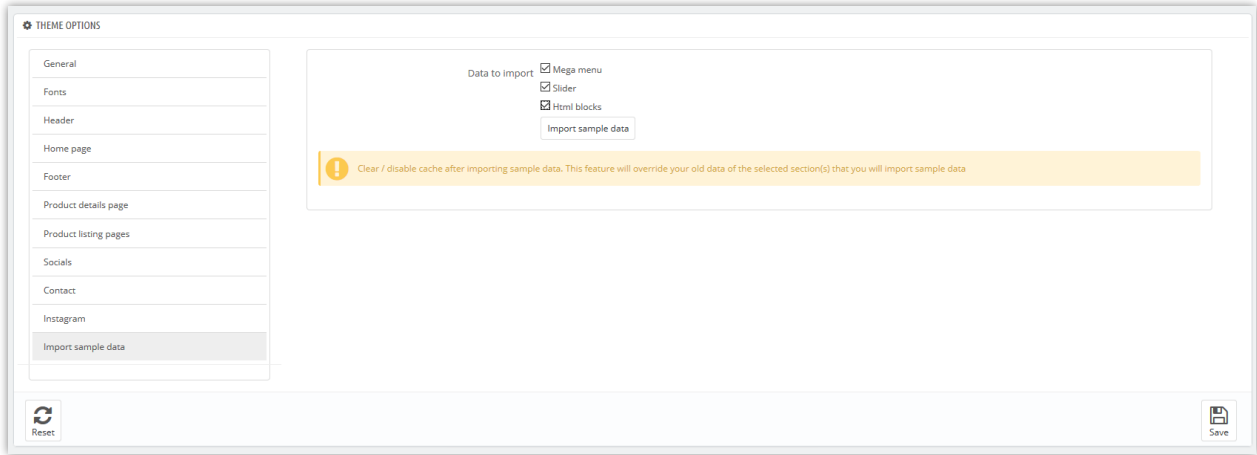

Navigate to **"Modules and services"** / **"Positions"**, here you can see the orders of your modules in each PrestaShop hook, check a hook called **"Header"**, make sure **"Theme options"** is on the top of the module list.

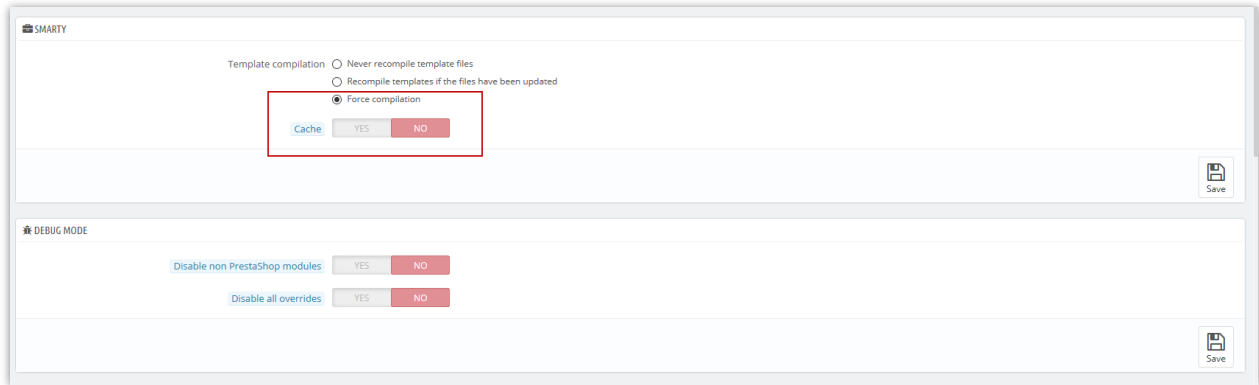

## IV. IMPORT SAMPLE DATA

You can quickly import our sample data to your PrestaShop website to make it the same as our demo websites.

Go to **“Theme options / Import sample data”** and choose type of data that you want to import.

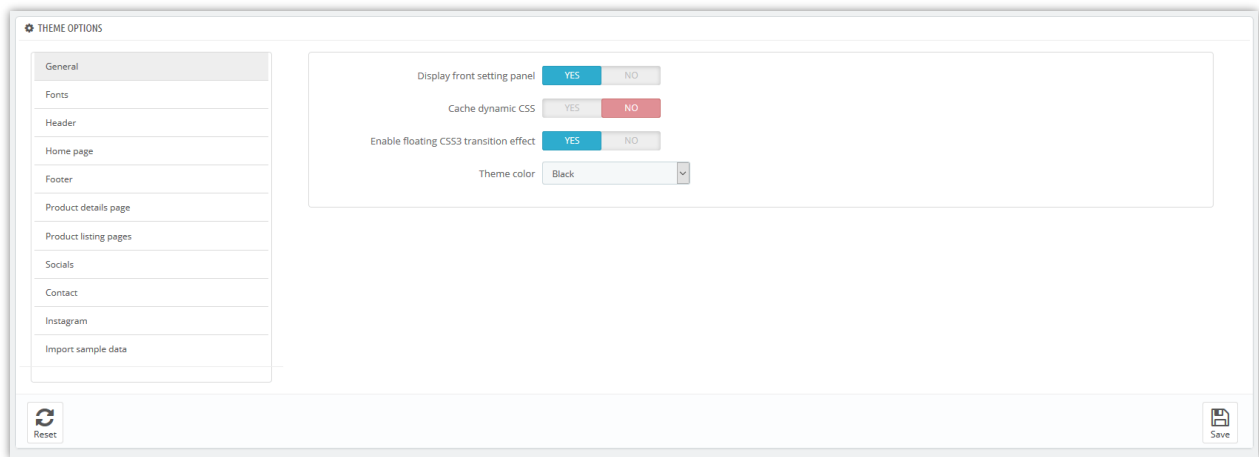

*Note: This option is recommended when you install the theme on a fresh PrestaShop website. Clear your website cache (or turn it off) after importing sample data.*

## V. THEME OPTIONS

This is a powerful PrestaShop theme, it offers many useful features that help you to manage the theme easily.

Navigate to **“Theme options”**:

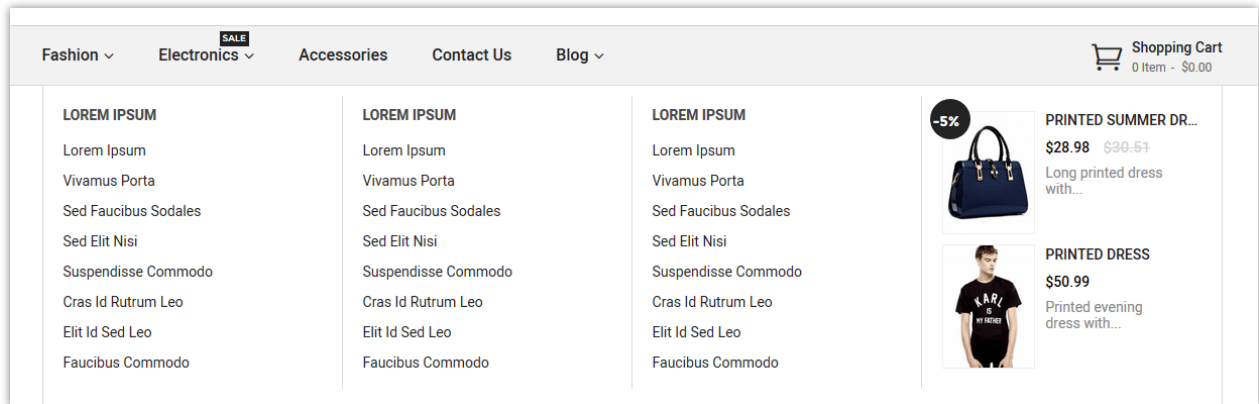

- After selecting a theme layout, you should reimport sample data to make your website like our live demos then start to replace the images/text by your real data (make sure your image sizes are the same as the sizes of our sample images).
- You can define your custom color set by selecting “**Custom color**” from “**Theme color**”.
- Cache dynamic CSS should be enabled for live website.
- This theme supports Google font, you can setup your custom font as below.

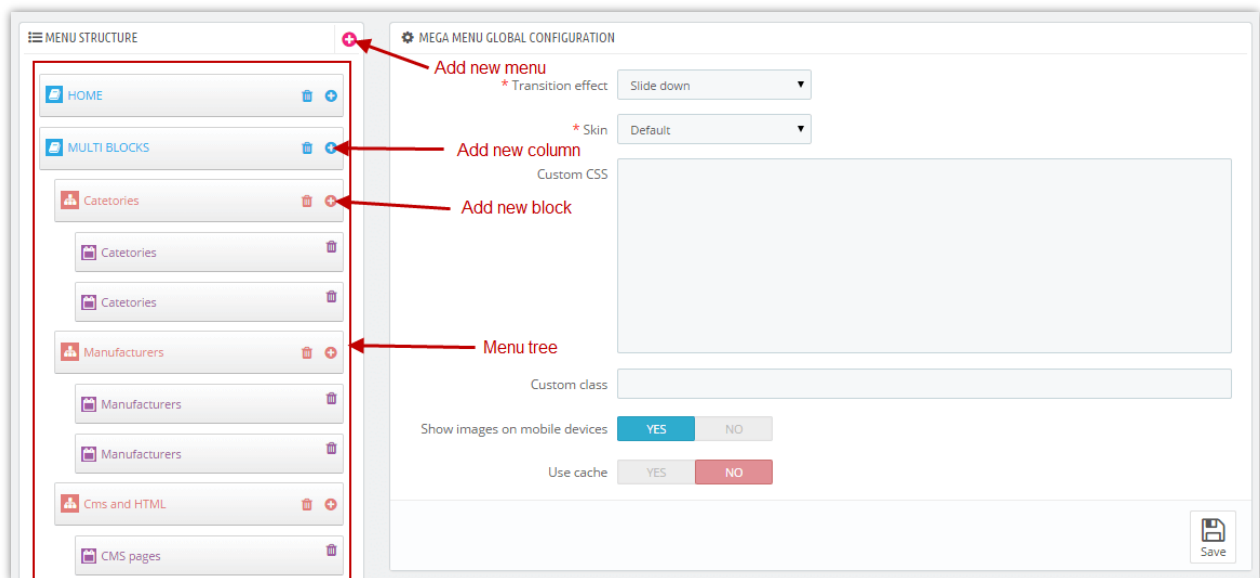

The image shows a form for configuring fonts. It contains six input fields arranged in three pairs. The first pair is for 'General font name' (with 'Open Sans' entered) and 'General font data' (with 'https://fonts.googleapis.com/css?family=Open+Sans' entered). The second pair is for 'Heading font name' and 'Heading font data'. The third pair is for 'Other font name' and 'Other font data'. Each input field has a light blue border and a light blue background. Below each 'name' field is a small italicized text label: 'Leave blank to use default font'.

## VI. MEGA MENU MODULE

This theme come with 2 forms of mega menu (vertical and horizontal) depending on the home page layout you select in back office. Our mega menu is organized by 3 main elements: menus, columns and blocks which will give you easy and flexible ways to create different types of simple or complex structures for your top menu.

To manage your mega menu, go to **“Modules and services”** and select **“Mega menu”** from the module list.

*Note: if you are transferring your site to new hosting service or domain, the **“Use cache”** option should be deactivated by selecting the **“no”** option and should be reactivated once the website is transferred, by selecting the **“yes”** option. **“Use cache”** helps to load your site faster when you have a complex menu structure.*

## VII. BLOG MODULE

With this theme you have one of the most powerful PrestaShop blog modules in the market place! You have a separated menu to manage your blog in the back office. This menu helps you manage your blog posts, categories, comments, slider, gallery and settings.

*\*Note: Set up your "notification emails" from the settings area in the back office to receive notification emails when someone comments on one of your blog posts or reports a comment as abused.*

*\*Tip: To have a link or a menu item to display your blog in the frontend of the website, copy the blog preview link from back office and add it to your top mega menu. Settings area gives you many different options for configuring your blog, take some time to check it out.*

## VIII. HTML WIDGETS

First of all, you need to understand what widgets are. Widgets are combinations of text and images placed on specific positions (hooks) of the website. With this theme you can create unlimited widgets and place them in different positions of your website.

Let's take a look at our frontend after the installation of the theme. These are the widgets that are available by default:

To manage widgets, navigate to “**Modules and services / HTML widgets**”:

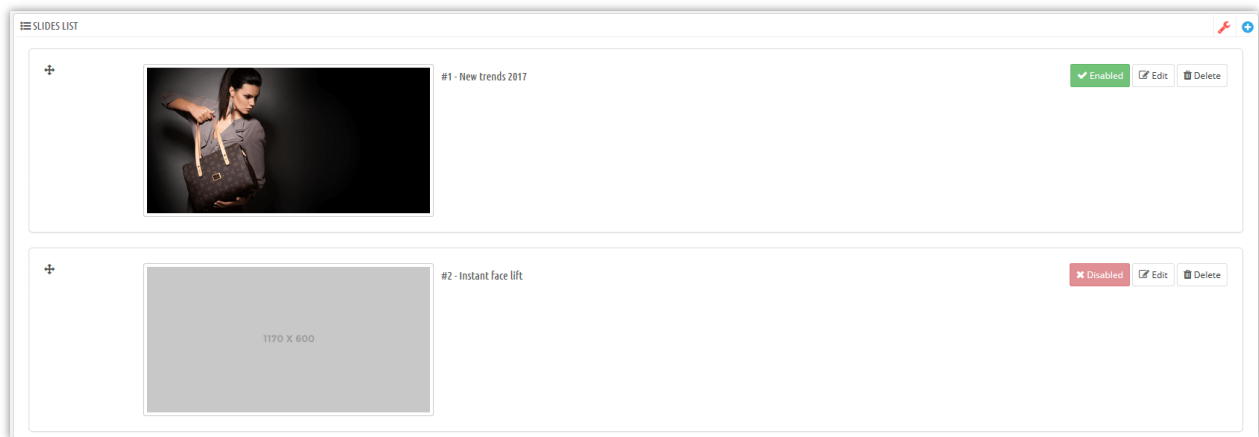

*\*Note:*

- *Uploading images with appropriate size to each widget is necessary because the upload of too large images could break the layout of the theme.*
- *Import sample data then replace images/text by your real data to make your site like our demo site.*

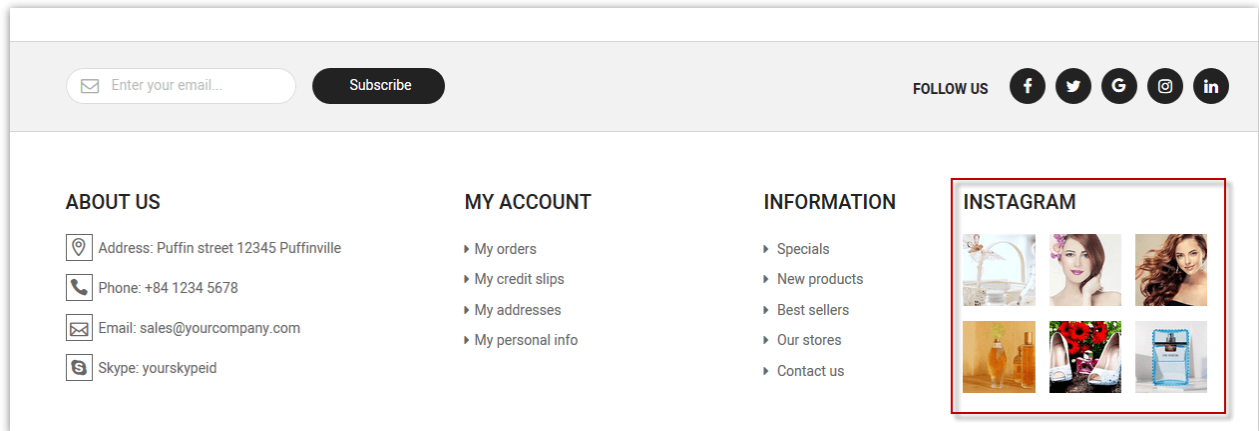

## IX. HOME SLIDER

To manage the home slider, navigate to **“Modules and services”** then select **“Nivo slider”** from the module list.

## X. INSTAGRAM IMAGES

To manage this module, navigate to **“Modules and services”** then select **“Instagram”** from the module list.

For more reference of how to get Instagram user ID and access token, check [here](#).
