I. WELCOME

Thank you for purchasing our product. We hope to guide you through all the aspects of the module installation and the module setup within this document. If you have any questions that are beyond the scope of this documentation, please feel free to contact us.

***Note:**

All instruction screenshots are taken from PrestaShop 1.7, but installing and configuring this module on PrestaShop 1.6 is similar.

II. INTRODUCTION

Getting annoyed with spam messages continuously sent from your website contact form?
Have a headache with spam customer accounts registered daily on your money website?

Say “Goodbye” to spam issues now! **CAPTCHA - reCAPTCHA** will solve all the spam issues that you’re dealing with.

* **“CAPTCHA - reCAPTCHA”** is compatible with PrestaShop from version 1.5.x to version 8.x

III. INSTALLATION

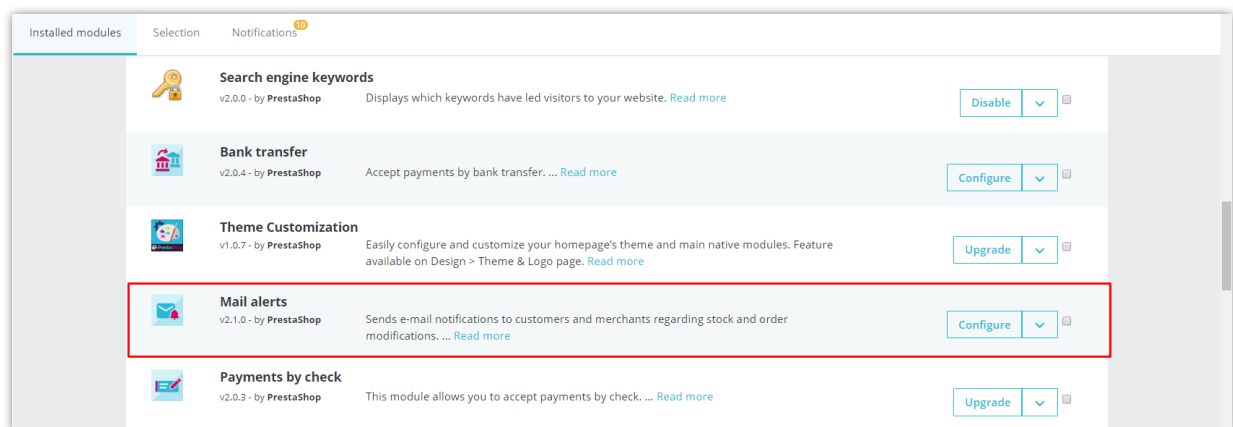

1. Navigate to **“Modules / Modules & Services”**, click on **“Upload a module / Select file”**
 2. Select the module file **“ets_advancedcaptcha.zip”** from your computer then click on **“Open”** to install
- ❖ Click on **“Configure”** button of the module you just installed to open the module’s configuration page.

IV. CONFIGURATION

From your installed module list (Located at **“Modules/Modules & services/Installed modules”**), find **“CAPTCHA - reCAPTCHA”** then click on the **“Configure”** button to open its configuration page.

***Note:**

a) To enable **“Out of product alert form”**, you must install **“Mail alert”** module first.

b) When using the *PrestaHero* **CAPTCHA - reCAPTCHA** module alongside the "**Creative Elements**" module developed by *WebshopWorks*, please be aware that the CAPTCHA - reCAPTCHA functionality will not be supported for forms created by the "**Creative Elements**" module.

If you need to display CAPTCHA/reCAPTCHA on forms generated by "**Creative Elements**," please get in touch with the developer *WebshopWorks* for further assistance.

1. Position

You can select the form where captcha box will be displayed. **CAPTCHA - reCAPTCHA** supports display captcha box on 6 different types of form:

- | Position | |
|-------------------------------------|------------------------------|
| <input checked="" type="checkbox"/> | Registration form |
| <input checked="" type="checkbox"/> | Contact form |
| <input checked="" type="checkbox"/> | Login form |
| <input checked="" type="checkbox"/> | Newsletter subscription form |
| <input checked="" type="checkbox"/> | Out of product alert form |
| <input checked="" type="checkbox"/> | Forgot your password form |

***Note:**

CAPTCHA does not support captcha feature for "**Newsletter subscription form**" on PrestaShop 1.5.x

For online shop owners who are using **PrestaShop 1.7.x**, after choosing positions to show captcha box, there is an option to enable/disable captcha when customer logged in.

Disable captcha when customer logged.

YES

NO

Captcha not display when customer logged.

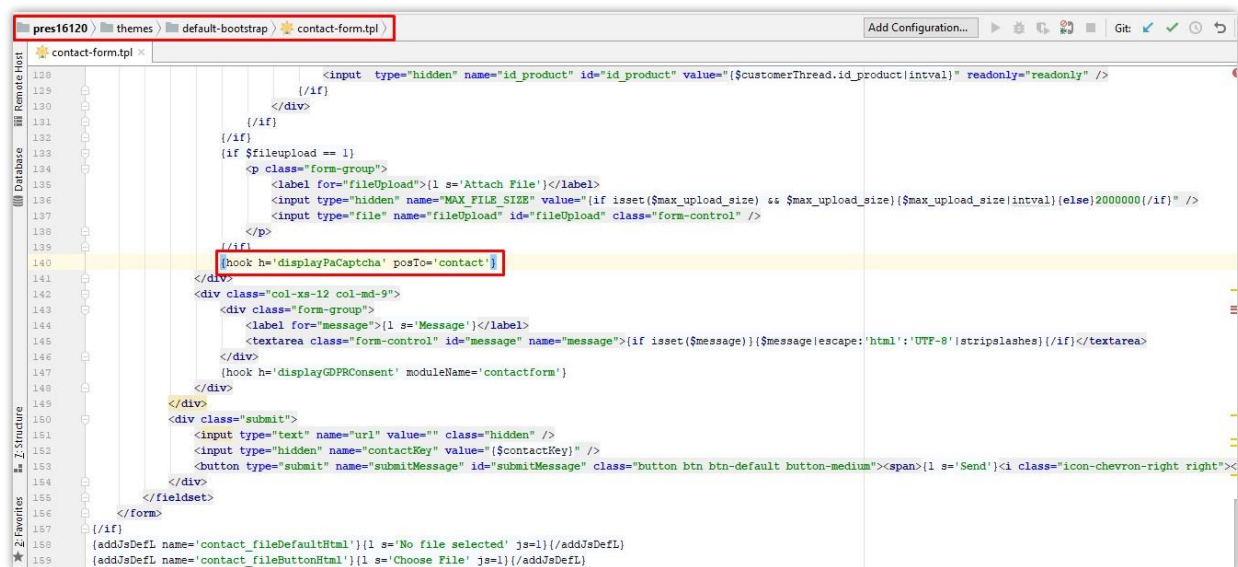

With shop owners using **PrestaShop 1.5.x and 1.6.x**, for certain locations you will see more options to set up. If you're using a custom theme or another custom module, you may get into some problems when installing **CAPTCHA - reCAPTCHA** to your website. To avoid these troubles, please follow our following guide:

❖ Contact form

Copy this code: `{hook h='displayPaCaptcha' posTo='contact'}`

Open this file: `root/YOUR-SITE/themes/YOUR-THEME/contact-form.tpl`

Paste the code you copied before into the `contact-form.tpl` just below the **file upload field** then save your changes.

```
128 <input type="hidden" name="id_product" id="id_product" value="{CustomerThread.id_product|intval}" readonly="readonly" />
129 </if>
130 </div>
131 </if>
132 </if>
133 <div class="form-group">
134 <input type="file" name="fileUpload" id="fileUpload" class="form-control" />
135 </div>
136 </div>
137 </div>
138 </div>
139 </div>
140 <div class="col-xs-12 col-md-9">
141 <div class="form-group">
142 <input type="text" name="url" value="" class="hidden" />
143 <input type="hidden" name="contactKey" value="{contactKey}" />
144 <button type="submit" name="submitMessage" id="submitMessage" class="button btn btn-default button-medium"><span>1 s='Send'</span><span class="icon-chevron-right right"></span></button>
145 </div>
146 </div>
147 </div>
148 </div>
149 </div>
150 </div>
151 </div>
152 </div>
153 </div>
154 </div>
155 </div>
156 </div>
157 </div>
158 </div>
159 </div>
```

❖ Login form

Copy this code: `{hook h='displayPaCaptcha' posTo='login'}`

Open this file: `root/YOUR-SITE/themes/YOUR-THEME/authentication.tpl`

Paste the code you copied before into the *authentication.tpl* just below the file upload field then save your changes.

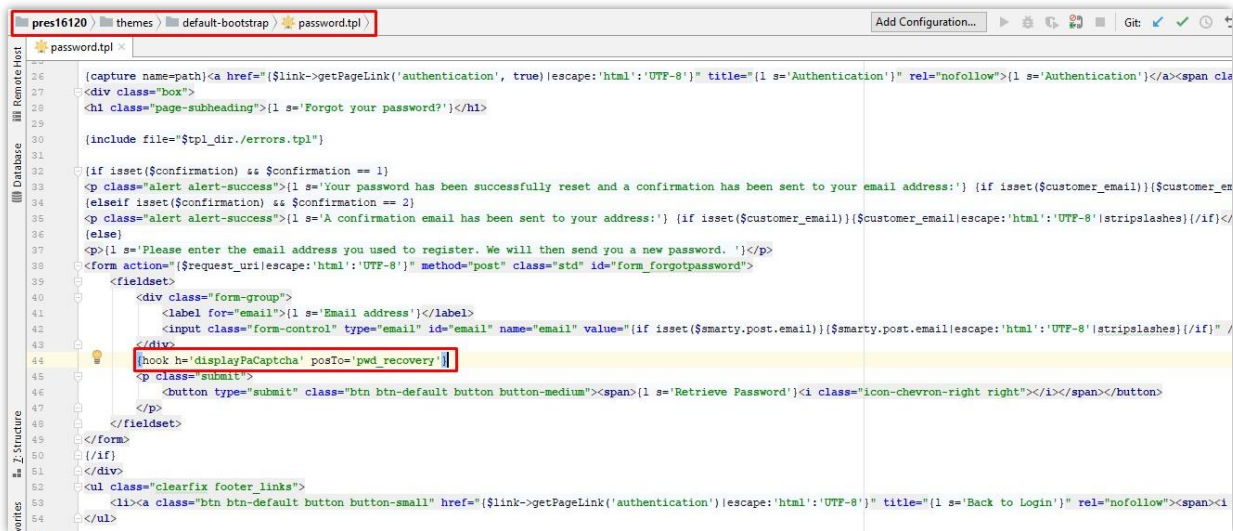

```
79 <div class="form_content clearfix">
80 <div class="form-group">
81 <label for="email">[1 s='Email address']</label>
82 <input class="is_required validate account_input form-control" data-validate="isEmail" type="email" id="email" name="email"
83 </div>
84 <div class="form-group">
85 <label for="passwd">[1 s='Password']</label>
86 <input class="is_required validate account_input form-control" type="password" data-validate="isPasswd" id="passwd" name="pa
87 </div>
88 {hook h='displayPaCaptcha' posTo='login'}
89 <p class="lost_password form-group"><a href="{ $link->getPageLink('password') |escape:'html':'UTF-8'}" title="[1 s='Recover your f
90 <p class="submit">
91 {if isset($back)}<input type="hidden" class="hidden" name="back" value="{ $back|escape:'html':'UTF-8'}" />{/if}
92 <button type="submit" id="SubmitLogin" name="SubmitLogin" class="button btn btn-default button-medium">
93 <span>
94 <i class="icon-lock left"></i>
95 [1 s='Sign in']
96 </span>
97 </button>
98 </p>
99 </div>
100 </form>
101 </div>
```

❖ Forgot your password form

Copy this code: `{hook h='displayPaCaptcha' posTo='pwd_recovery'}`

Open this file: *root/YOUR-SITE/themes/YOUR-THEME/password.tpl*

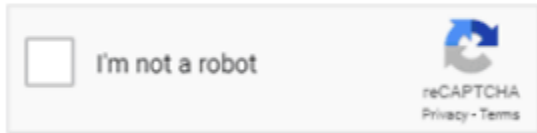

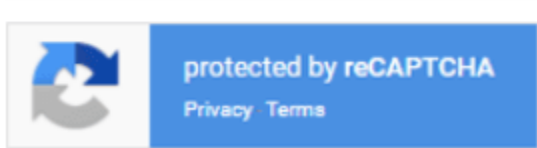

Paste the code you copied before into the *password.tpl* just below the file upload field then save your changes.

```
26 {capture name=page}<a href="{ $link->getPageLink('authentication', true) |escape:'html':'UTF-8'}" title="[1 s='Authentication']" rel="nofollow">[1 s='Authentication']</a><span cla
27 <div class="box">
28 <h1 class="page-subheading">[1 s='Forgot your password?']</h1>
29
30 {include file=$tpl_dir/errors.tpl}
31
32 {if isset($confirmation) && $confirmation == 1}
33 <p class="alert alert-success">[1 s='Your password has been successfully reset and a confirmation has been sent to your email address:'] {if isset($customer_email)}{$customer_em
34 {elseif isset($confirmation) && $confirmation == 2}
35 <p class="alert alert-success">[1 s='A confirmation email has been sent to your address:'] {if isset($customer_email)}{$customer_email|escape:'html':'UTF-8'|stripslashes}{/if}<
36 {else}
37 <p>[1 s='Please enter the email address you used to register. We will then send you a new password. ']</p>
38 <form action="{ $request_uri |escape:'html':'UTF-8'}" method="post" class="std" id="form_forgotpassword">
39 <fieldset>
40 <div class="form-group">
41 <label for="email">[1 s='Email address']</label>
42 <input class="form-control" type="email" id="email" name="email" value="{if isset($smarty.post.email)}{$smarty.post.email|escape:'html':'UTF-8'|stripslashes}{/if}"
43 </div>
44 {hook h='displayPaCaptcha' posTo='pwd_recovery'}
45 <p class="submit">
46 <button type="submit" class="btn btn-default button button-medium"><span>[1 s='Retrieve Password']<i class="icon-chevron-right right"></i></span></button>
47 </p>
48 </fieldset>
49 </form>
50 {/if}
51 </div>
52 <ul class="clearfix footer_links">
53 <li><a class="btn btn-default button button-small" href="{ $link->getPageLink('authentication') |escape:'html':'UTF-8'}" title="[1 s='Back to Login']" rel="nofollow"><span><i
54 </li>
```

2. Captcha types

CAPTCHA - reCAPTCHA offers 5 types of captcha for you to select the most suitable with your current theme.

- * Captcha type
-  Simple captcha - Easy level
 -  Simple captcha - Medium level
 -  Simple captcha - Difficult level
 -  Google reCAPTCHA - V2
 -  Google reCAPTCHA - V3

To use Google reCaptcha, you will need to enter Site key and Secret key.

❖ How to get Site key and Secret key

For reCAPTCHA - v2

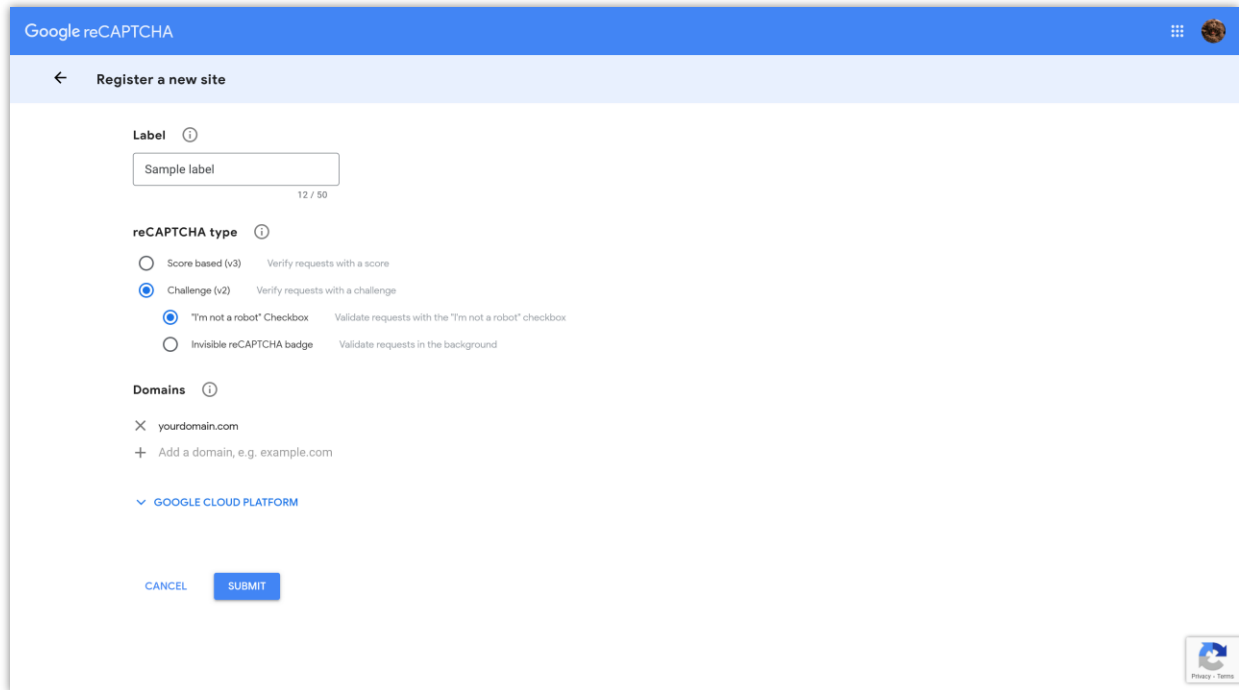

Step 1: Access this page <https://www.google.com/recaptcha/admin> and log in with your Google account.

Step 2: Click the “Create” icon in the top-right corner.

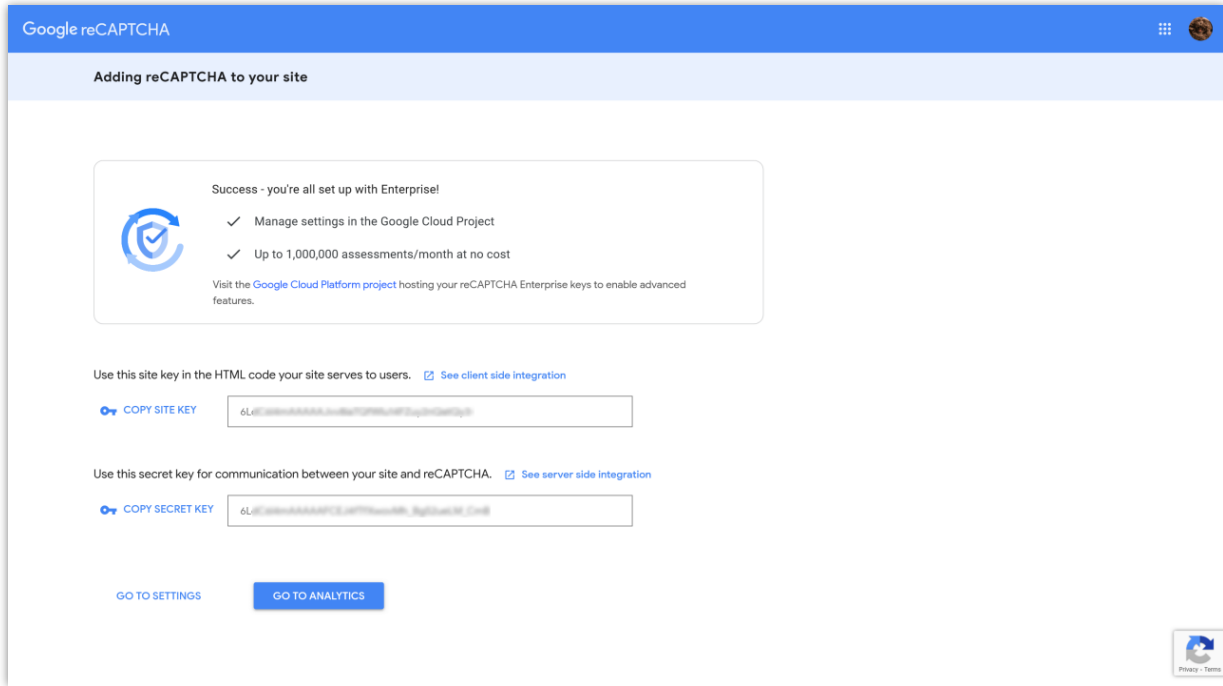

On the “Register a new site” screen, enter the required information: label, reCAPTCHA type, your domain.

Click on “Submit” button to finish.

The screenshot shows the Google reCAPTCHA "Register a new site" interface. At the top, there is a blue header with the "Google reCAPTCHA" logo and a user profile icon. Below the header, a light blue bar contains a back arrow and the text "Register a new site". The main content area is white and contains three sections: "Label" with a text input field containing "Sample label" and a character count "12 / 50"; "reCAPTCHA type" with three radio button options: "Score based (v3)", "Challenge (v2)" (which is selected), and "Invisible reCAPTCHA badge"; and "Domains" with a list containing "yourdomain.com" and an option to "Add a domain, e.g. example.com". At the bottom left, there are "CANCEL" and "SUBMIT" buttons. At the bottom right, there is a "Privacy - Terms" link.

Step 3: Copy Site key and Secret key to the module backend.

For reCAPTCHA - v3

Step 1: Access this page <https://www.google.com/recaptcha/admin> and log in with your Google account.

Step 2: Click the “Create” icon in the top-right corner.

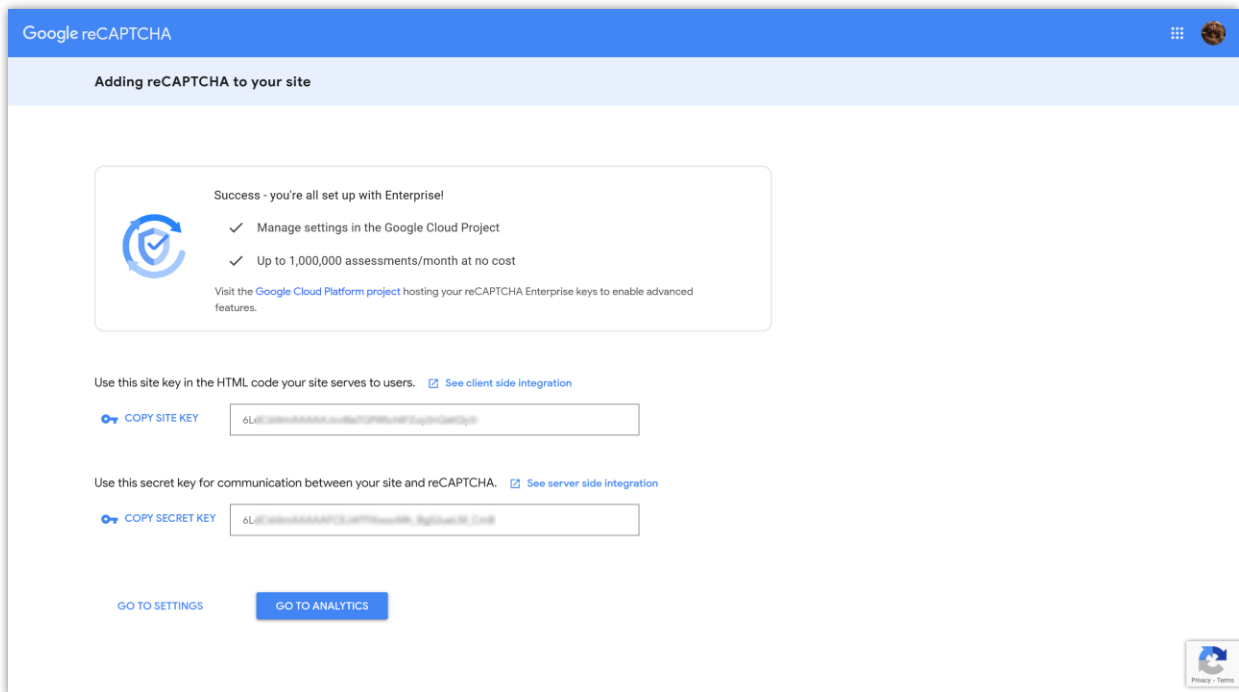

On the “Register a new site” screen, enter the required information: label, reCAPTCHA type, your domain.

Click on “Submit” button to finish.

Step 3: Copy Site key and Secret key to the module backend

3. IP blacklist and email blacklist

❖ IP blacklist

With **CAPTCHA - reCAPTCHA**, you can enter IP addresses of spammers and ban them from submitting your forms.

***Note:**

IPv4 addresses are usually represented in dot-decimal notation, consisting of four decimal numbers, each ranging from 0 to 255, separated by dots, each part represents a group of 8 bits (an octet) of the address.

IP blacklist (IPs to block)

```
69.89.31.226
69.89.31.*
112.100.*.*
```

Enter exact IP or IP pattern using "", each IP/IP pattern on line. For example: 69.89.31.226, 69.89.31.*, *.226, etc.*

You may enter the exact IP address (for example: **69.89.31.226**) or an IP pattern using "*" character, each IP/IP pattern on one line.

***Note:**

IP pattern is a way to represent an IP address range. You can replace one or several octets of IP address with "" character. For example, if you enter this IP pattern: **69.89.31.***, CAPTCHA will ban all IP addresses **from 69.89.31.0 to 69.89.31.255***

❖ Email blacklist

Similar to banning IP addresses, you can also ban email addresses which often send spam emails to your inbox. **CAPTCHA - reCAPTCHA** also supports banning email addresses from email domain such as mail.ru, qq.com, etc.

Email blacklist (emails to block)

```
spam1@mail.ru
*@mail.ru
spam2@qq.com
*@qq.com
```

Enter exact email address or email pattern using "", each email/email pattern on a line. For example: example@mail.ru, *@mail.ru, *@qq.com, etc.*

You can enter the exact email address or email pattern using "*" character, each email or email pattern on a line.

For example, if you enter [*@mail.ru](#) email pattern, **CAPTCHA - reCAPTCHA** will ban all emails which are sent from users having "@mail.ru" on their email addresses.

4. Tips

This module should work perfectly on most Prestashop websites without any code modification, however if you website is installed with a custom theme or custom modules you may (rarely) get into some problems when installing the module to your website.

The following tips will guide you on how to quickly fix the problems by modifying some code so you can fix the problems yourself but we recommend you contact us. We're happy to support you and we'll help you solve the issues for free!

❖ For PrestaShop 1.7.x

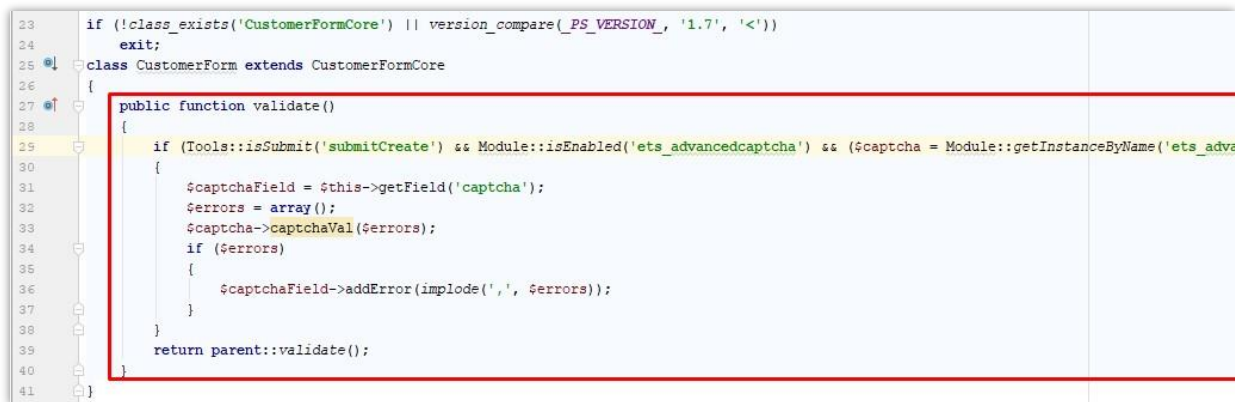

If you see an error that says methods **validate** and **getFormat** are overridden already by another module, it means some other modules have overridden the method that causes blocking the **CAPTCHA - reCAPTCHA** module to implement its overriding code. To solve the problem, you need to manually edit the methods (in overriding files) with the overriding code of the **CAPTCHA - reCAPTCHA** module.

ERROR: "METHOD VALIDATE() IS OVERRIDEN ALREADY"

Step 1: Open this file: *root/YOUR-*

SITE/modules/ets_advancedcaptcha/override/classes/form/CustomerForm.php

Step 2: Copy the code highlighted on the photo below

```
23 if (!class_exists('CustomerFormCore') || version_compare(_PS_VERSION_, '1.7', '<'))
24     exit;
25 class CustomerForm extends CustomerFormCore
26 {
27     public function validate()
28     {
29         if (Tools::isSubmit('submitCreate') && Module::isEnabled('ets_advancedcaptcha') && ($captcha = Module::getInstanceByName('ets_adv
30             {
31                 $captchaField = $this->getField('captcha');
32                 $errors = array();
33                 $captcha->captchaVal($errors);
34                 if ($errors)
35                 {
36                     $captchaField->addError(implode(', ', $errors));
37                 }
38             }
39         return parent::validate();
40     }
41 }
```

Step 3: Open this file: *root/YOUR-SITE/override/classes/form/CustomerForm.php*

Step 4: Find a method (function) named "validate", paste the code you copied at step 2 into the method just at the START of the method then save your changes

ERROR: "METHOD GETFORMAT() IS OVERRIDEN ALREADY"

Step 1: Open this file: *root/YOUR-*

SITE/modules/ets_advancedcaptcha/override/classes/form/CustomerFormatter.php

Step 2: Copy the code highlighted in the photo below

```
22
23 if (!class_exists('CustomerFormatterCore') || version_compare(_PS_VERSION_, '1.7', '<'))
24     exit;
25 class CustomerFormatter extends CustomerFormatterCore
26 {
27     public function getFormat()
28     {
29         if (Module::isEnabled('ets_advancedcaptcha') && ($captcha = Module::getInstanceByName('ets_advancedcaptcha')) && $captcha->isEnabled())
30         {
31             $formats = parent::getFormat();
32             $formats['captcha'] = (new FormField)
33                 ->setName('captcha')
34                 ->setType('hidden')
35                 ->setRequired(true)
36                 ->setValue(1);
37             return $formats;
38         }
39         return parent::getFormat();
40     }
41 }
```

Step 3: Open this file: *root/YOUR-SITE/override/classes/form/CustomerFormatter.php*

Step 4: Find a method (function) named "getFormat", paste the code you copied at step 2 into the method just at the START of the method then save your changes.

ERROR: "METHOD SUBMIT() IS OVERRIDEN ALREADY"

Step 1: Open this file: *root/YOUR-*

SITE/modules/ets_advancedcaptcha/override/classes/form/CustomerLoginForm.php

Step 2: Copy the code highlighted on the photo below

```
22
23 if (!class_exists('CustomerLoginFormCore') || version_compare(_PS_VERSION_, '1.7', '<'))
24     exit;
25 class CustomerLoginForm extends CustomerLoginFormCore
26 {
27     public function submit()
28     {
29         if (Tools::isSubmit('submitLogin') && Module::isEnabled('ets_advancedcaptcha') && ($captcha = Module::getInstanceByName('ets_advancedcaptcha')) && $captcha->isEnabled())
30         {
31             $captcha->captchaVal($this->errors['']);
32         }
33         return !$this->errors['']? parent::submit() : !$this->hasErrors();
34     }
35 }
```

Step 3: Open this file: *root/YOUR-SITE/override/classes/form/CustomerLoginForm.php*

Step 4: Find a method (function) named "submit", paste the code you copied at step 2 into the method just at the START of the method then save your changes.

❖ **For PrestaShop 1.5.x and 1.6.x**

ERROR: "OVERRIDE CONTROLLER"

If methods: *processSubmitAccount*, *processSubmitLogin*, *sendRenewPasswordLink*, *postProcess*, *initContent* are overridden already, follow these steps to fix the problem.

Step 1: Open 3 files: *AuthController.php*, *ContactController.php*, *PasswordController.php* that are located in "root/YOUR-SITE/modules/ets_advancedcaptcha/override/controllers/front/" folder

Step 2: Copy methods (functions) that are defined on the files.

Step 3: Open these respective overriding files (*AuthController.php*, *ContactController.php*, *PasswordController.php*) in overriding folder of your website at "root/YOUR-SITE/override/controllers/front/"

Step 4: Find and replace the methods defined in those files with the methods you copied in step 2 then save your changes

***Note:** *if you replace the whole methods that are overridden by other modules, the other modules may not work properly anymore (but the **CAPTCHA - reCAPTCHA** module will surely work).*

So, if you have programming knowledge, you should check the existing overridden methods and only insert necessary codes that are defined on overriding files of the **CAPTCHA - reCAPTCHA** module.

We recommend you contact us for a quick and free fix of the problem (as it requires coding work), we're happy to support you.

V. THANK YOU

Thank you again for purchasing our product and going through this documentation. We hope this document is helpful and efficient in the complete setup of this module.

If you do have any questions for which the answer is not available in this document, please feel free to contact us.
