I. WELCOME

Thank you for purchasing our product. We hope to guide you through all the aspects of the module installation and the module setup within this document. But if you have any questions beyond this documentation's scope, please feel free to contact us.

***Note:**

All instruction screenshots are taken from PrestaShop 1.7, but installing and configuring this module on PrestaShop 1.6 is similar.

II. INTRODUCTION

If you are not using contact forms on your website, you are missing out one of the most essential elements a well-built and interactive website should have. With contact forms, you can generate leads, make sales and conversions, and understand your audience better. Whether it be your personal blog or business website, the benefits of using contact forms cannot be underestimated. And with our **Contact Form Ultimate** module, it will become even more easy to create and design high-quality contact forms that attract users without much effort on your part.

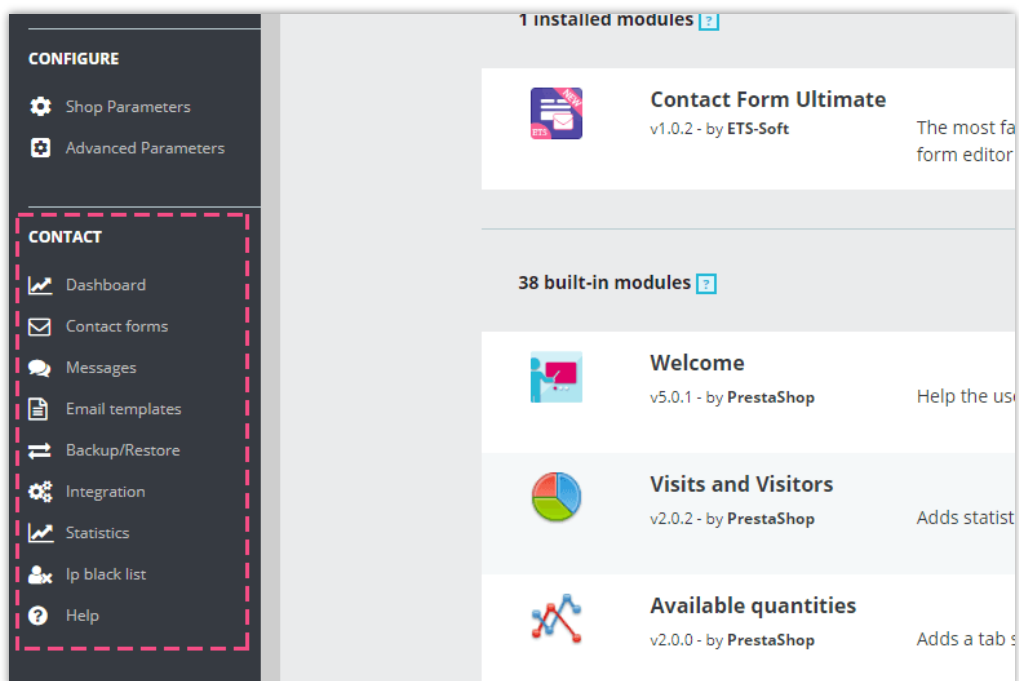

Contact Form Ultimate is an innovative contact form builder module for PrestaShop which can enable you to create unlimited contact forms. It supports all the necessary input fields, easy to customize and also easy to manage.

* **"Contact Form Ultimate"** is compatible with PrestaShop 1.6.x, 1.7.x to PrestaShop 8.x

III. INSTALLATION

1. Navigate to **“Modules / Modules & Services”**, click on **“Upload a module / Select file”**
2. Select the module file **“ets_cfultimate.zip”** from your computer then click on **“Open”** to install
 - ❖ Click on **“Configure”** button of the module you just installed to open the module’s configuration page.

Quick access: You can also navigate to **Contact form Ultimate’s** configuration page through the quick access menu.

IV. CREATE YOUR FIRST CONTACT FORM

1. General form settings

From **Dashboard**, click on **"Contact forms"** box to navigate to **Contact forms** tab. Click on **"Add New"** icon on top right of the panel.

The screenshot displays the 'Contact Management' dashboard. The 'CONTACT MANAGEMENT' section contains several icons: 'Contact Forms' (highlighted with a red dashed box and a green arrow), 'Messages', 'Email Templates', 'Import/Export', 'Integration', 'Statistics', 'IP blacklist', and 'Help'. The 'CONTACT TRAFFIC' section shows a line graph for 'Statistics' and a 'Last visits' table with one entry: 'Opera 58.0.3135.118 Windows' on '2019-09-27 09:20:34'. The bottom navigation bar includes 'Dashboard', 'Contact forms' (selected), 'Messages', 'Statistics', 'IP blacklist', 'Settings', and 'Help'. An 'ADD NEW' button is located in the top right corner of the 'Contact forms' panel, indicated by a red arrow. Below the navigation bar, a table header for 'CONTACT FORMS' is visible, with columns for ID, Title, Short code, Form URL, Views, Sort order, Save message, Active, and Action. A yellow banner at the bottom of the table area states 'No contact forms available'.

Fill in required fields and select optional settings.

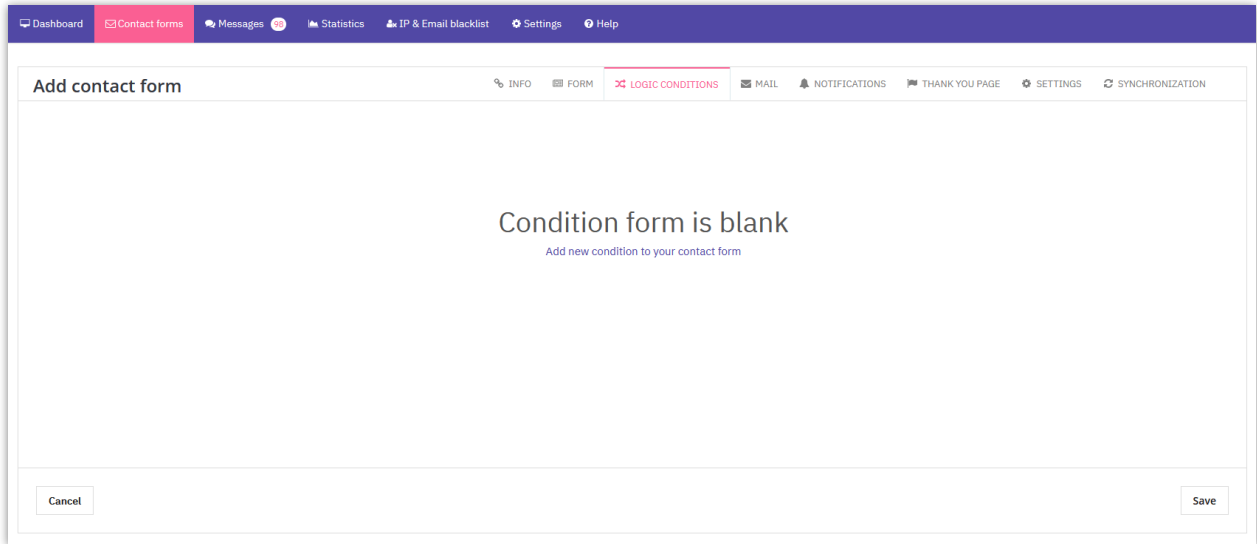

- Enable separate form page: turn on this option to create a specific web page to display this contact form
- Form title: title of the form displayed on the front end.
- Contact form alias: the alias will appear on URL of this contact form instead of form title
- Meta title, meta keywords, meta description: SEO elements to help you optimized your contact form.

Click **“Save”** button to save your contact form.

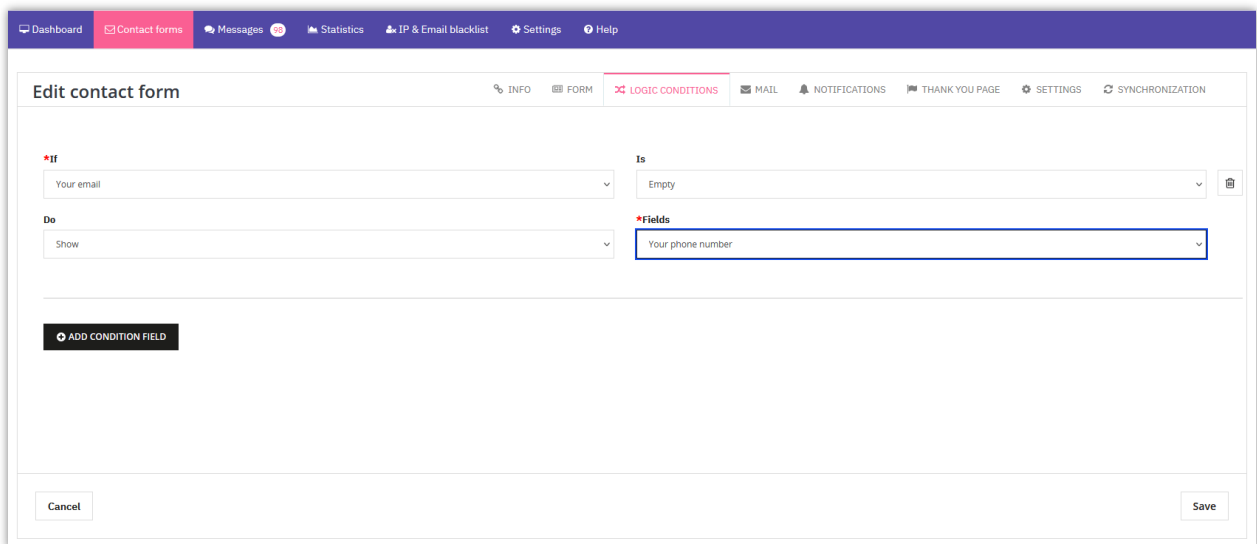

2. Condition Logics

Contact Form Ultimate module allows you to set logic conditions to show/hide the fields you’ve set up on the **“Form”** tab.

Click **“Add new condition to your contact form”** to start adding a new one.

Now, you just need to set conditions that meet your needs. For example, you only want to display the “*Your phone number*” field when the “*email*” field is empty. This means the “*Your phone number*” field will be hidden if the customer filled in their email on the survey form.

Now, let's check how it runs on the front office:

Customer survey form

Please help us improve our service to serve you better next time

Your Name*

Iris

Your email*

"Your email" field is empty

Your phone number

0123456789

Display "Your phone number" field

Which kind of your meal?

Breakfast Lunch Dinner

Do you have any comment for us?

SUBMIT

Please help us improve our service to serve you better next time

Your Name* <input type="text" value="Iris"/>	Your email* <input type="text" value="gmail.com"/>
--	--

Which kind of your meal?
 Breakfast Lunch Dinner

Quality of food?* <input type="text" value="Perfect"/>	Cleanliness? <input type="text" value="Perfect"/>
Easy of Ordering? <input type="text" value="Perfect"/>	Overall Quality? <input type="text" value="Perfect"/>

Do you have any comment for us?

"Your phone number" field will not be shown when customer fill in "Your email" field

3. Adding input fields

To build your contact form content, let's navigate to **"Form"** subtab.

Every contact form is created from rows and input fields.

Step 1: Add a row to your form

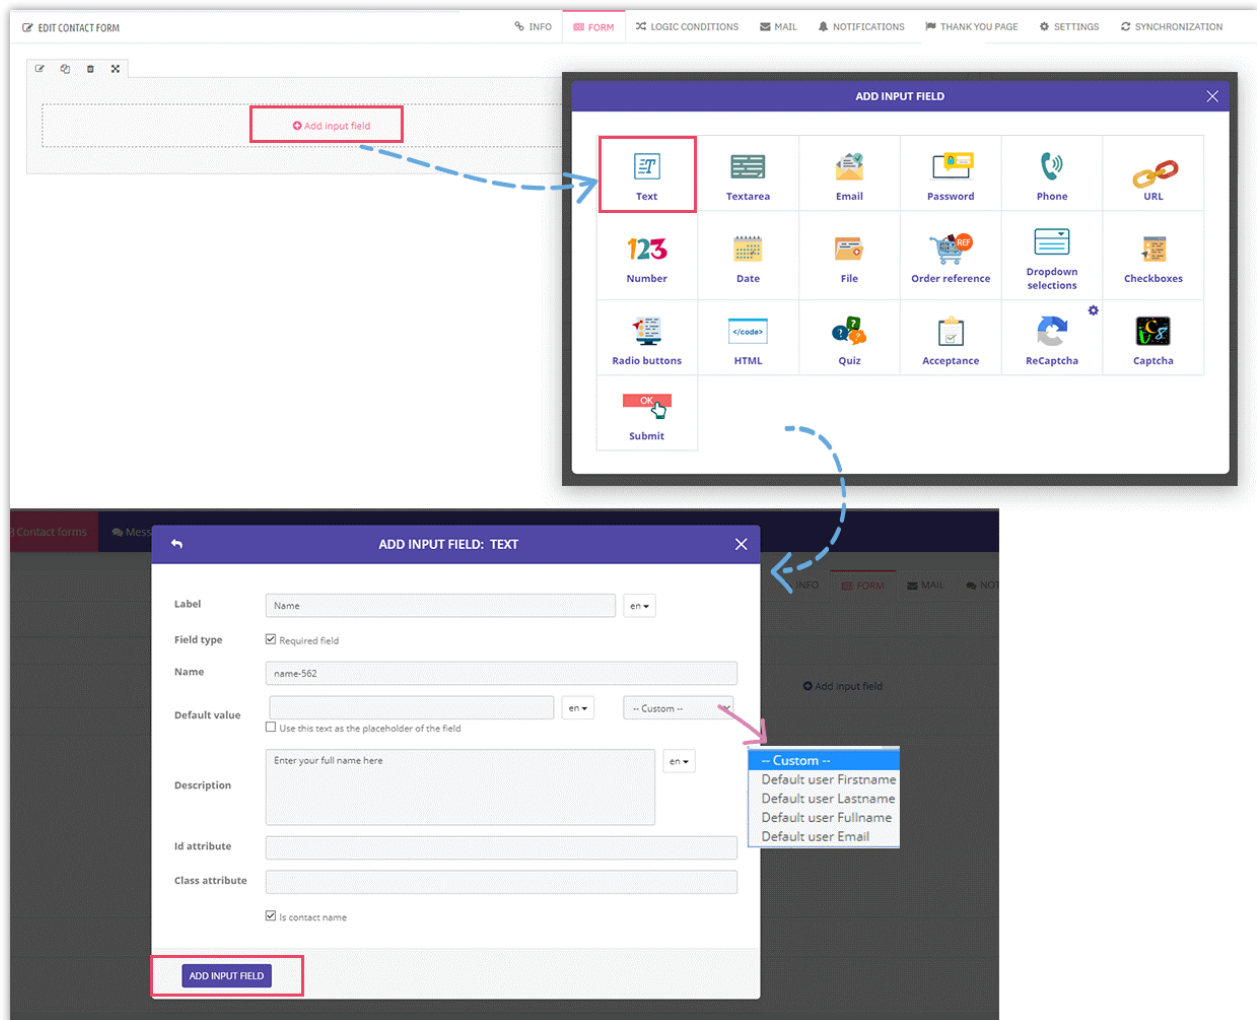

- Click on **“Add row”** button
- Pick a suitable row template

Step 2: Add an input field

- Click on **“Add input field”**

- Select an input field you want (*text, text area, email, password, telephone number, URL, number, date, file, order reference, drop-down selection, checkboxes, radio buttons, HTML, quiz, acceptance, reCAPTCHA, CAPTCHA, submit*)
- Fill in the pop-up form with necessary info
- Click **“Add input field”** button

Repeat **Step 1** and **Step 2** until you complete your contact form.

Click **“Save”** to save your changes.

NOTE:

To add reCAPTCHA input field, you need to enable reCAPTCHA first. Find and read the instruction to activate **reCAPTCHA** feature in this documentation.

4. Email configuration

Click on the **“Mail”** subtab to open email configuration area for the contact form.

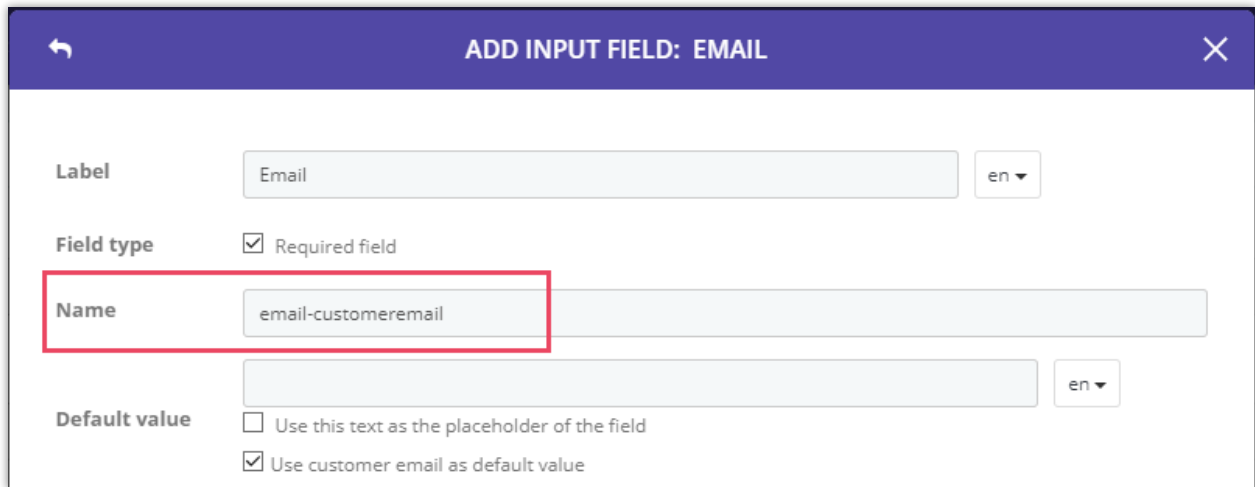

a. Email to admin

On this screen you will set up the email send to your store administrators when there is a new contact messenger received.

You can see 2 sections of **Email to admin** tab: email options section and **“Available mail-tags”** section.

The screenshot displays the 'Edit contact form' interface with the 'MAIL' tab selected. The interface includes a top navigation bar with 'Dashboard', 'Contact forms', 'Messages', 'Statistics', 'IP & Email blacklist', 'Settings', and 'Help'. Below this, a sub-navigation bar contains 'INFO', 'FORM', 'LOGIC CONDITIONS', 'MAIL', 'NOTIFICATIONS', 'THANK YOU PAGE', 'SETTINGS', and 'SYNCHRONIZATION'. The main content area is titled 'Edit contact form' and features a sidebar on the left with 'Email to admin' and 'Auto responder' options. The 'Email to admin' section is active, showing fields for 'To', 'BCC', 'From', 'Subject', and 'Reply to'. The 'To' field is filled with 'Demo Contact form ultimat' and 'demo@yourcompany.com'. The 'BCC' field is empty. The 'From' field is empty. The 'Subject' field is filled with 'Your email subject'. The 'Reply to' field is empty. Below these fields is a 'Message body' section with a rich text editor. On the right side, there is an 'Available mail-tags' section with a note: 'Copy mail-tags below and paste into any configuration fields of the "Email to admin" and "Auto responder" to get form input value.' and a button labeled '[all-fields]'. At the bottom of the interface, there are 'Cancel' and 'Save' buttons.

Available mail-tags are provided from the **"Name"** of every input fields you added. To make mail-tags easier to remember, you should set reminiscent **"Name"** for input fields such as *[email-customeremail]*, *[name-customername]*, *[text-firstname]*, etc.

The screenshot shows a form titled "ADD INPUT FIELD: EMAIL" with a blue header and a white body. The form contains several fields and checkboxes:

- Label:** A text input field containing "Email" and a language dropdown menu set to "en".
- Field type:** A checkbox labeled "Required field" which is checked.
- Name:** A text input field containing "email-customeremail", which is highlighted with a red rectangular border.
- Default value:** A text input field (empty) and a language dropdown menu set to "en". Below it are two checkboxes:
 - Use this text as the placeholder of the field
 - Use customer email as default value

To: Enter here receiver's email address which you would like to receive notification messages

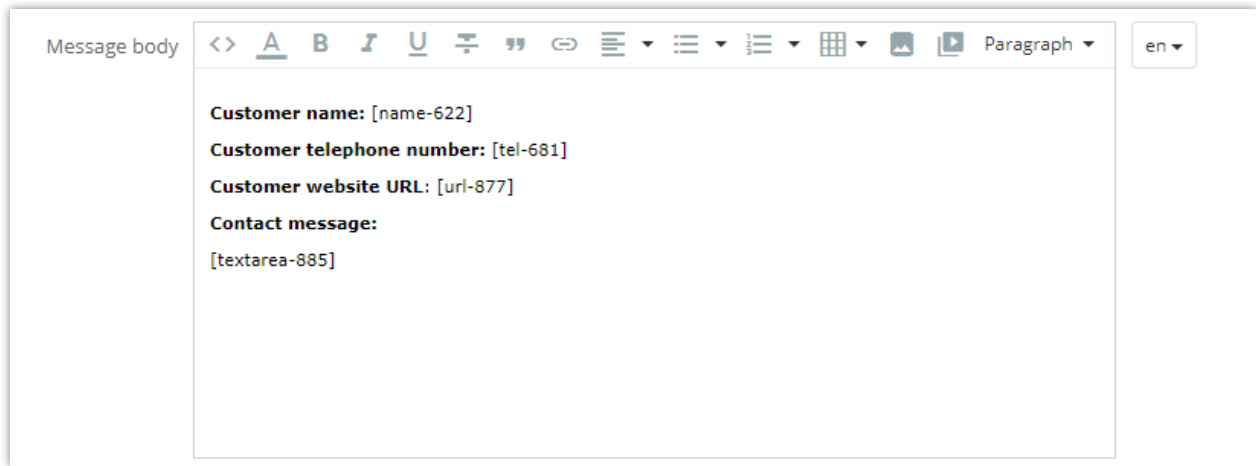

Bcc: When you place email addresses in the Bcc field of a message, those addresses are invisible to the recipients of the email.

From: Enter here sender's email address which is used to send emails when customer contact you via this contact form. If this field is blank, your website's configured SMTP email will be used as sender email (in case no SMTP email is available, shop's email will be used instead). To avoid emails are considered as spam by receiver's email service, you need to enter an authorized email address, normally it should be your website's configured SMTP email nor an email created with your website domain such as contact@yourdomain.com

Subject: Email subject used when an email is sent via the contact form

Reply to: Email address to be specified as **"Reply email"** when you click on **"Reply"** button of your mail box when a message sent from the contact form to your email (receiver email).

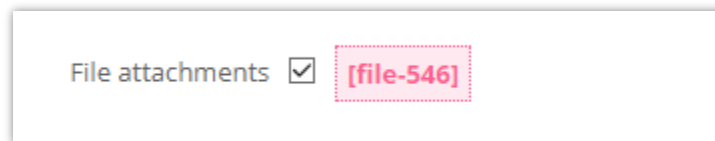

Message body: Email content which will be sent to the receiver's email address. You can copy and paste available mail-tags to get the form input value. For example:

The screenshot shows an email editor interface. At the top, there is a toolbar with various icons for text formatting (bold, italic, underline, link, list, table, image, video) and a language dropdown set to 'en'. Below the toolbar is a text area labeled 'Message body'. The text area contains the following content:

Customer name: [name-622]
Customer telephone number: [tel-681]
Customer website URL: [url-877]
Contact message:
[textarea-885]

File attachments: If customer send an attached file, you can download it via your email.

The screenshot shows a checkbox labeled 'File attachments' which is checked. To the right of the checkbox is a red dashed box containing the text '[file-546]'.

Click **“Save”** to save your changes.

b. Auto responder

Auto responder is an additional email sent to anyone you want when customer submits a contact form. It's often used to send a confirmation email to customer when they successfully submit a contact form.

Similar to **“Email to admin”**, you can set up email options using available mail-tags.

Click **“Save”** when you’re ready.

c. How to use mail-tags

You need to enter respective mail-tags into any configuration fields of the **"Email to admin"** and **"Auto responder"** to get form input value.

For example: when creating contact form, you added an **email input field** and its name is **email-customeremail**. **Contact Form Ultimate** will automatically generate a mail-tag **[email-customeremail]** which can get the email value from your contact form.

Now back to the email options, you can see there are some configuration fields using email addresses. If you want to add your customer email address received from contact form, copy and paste the mail-tag `[email-customeremail]` into these fields:

The screenshot shows an email configuration interface with the following fields and content:

- To:** Luna Cosmetic, your_company@gmail.com. Includes a trash icon and a plus icon.
- Name:** [text-customername], Email: [email-customeremail]. Includes a plus icon.
- Bcc:** Name: [text-customername], Email: [email-customeremail]. Includes a plus icon.
- From:** [text-customername], [email-customeremail]. Includes a note: "This should be an authorized email address. Normally it is your shop SMTP email (if your website is enabled with SMTP) or an email associated with your website domain name (if your website uses default Mail() function to send emails)".
- Subject:** Su asunto del correo electrónico, en.
- Reply to:** [text-customername], [email-customeremail].
- Message body:** Paragraph. Includes a rich text editor toolbar and a preview area showing:
 - Full name: [text-customername]
 - Email: [email-customeremail]
 - Phone number: [tel-customer-phone]
 - Message: [textarea-message]

Click **“Save”** to save your email template.

5. Custom notification messages

Contact Form Ultimate allows you to customize any notification messages that may appear in certain situations when customers use the contact form on the frontend.

Notification messages are filled with default values which are suitable for most kinds of contact form but if you would like to change the messages you can do that easily by clicking on "**Notification**" subtab. Here you can edit any messages you want in each language.

6. "Thank you" page

You can set up a "Thank you" page to send confirmation message to customers after they submitting a form. This module allows you to set *custom URL* for this "Thank you" page and set up *Page alias* to make page URL friendlier.

The screenshot shows the 'Edit contact form' interface with the 'THANK YOU PAGE' tab selected. The configuration includes:

- Display "Thank you" page after form submission:** Yes (toggle)
- "Thank you" page:** Default page (dropdown)
- Title:** Thanks for submitting the form (text input)
- Page alias:** thanks-for-submitting-the-form-11 (text input)
- Form page url:** <https://demo2.presta-demos.com/c/ultimate/en/contact/thank/thanks-for-submitting-the-form-11>
- Content:** Thank you for contacting us. This message is to confirm that you have successfully submitted the contact form. We'll get back to you shortly.

After customers submitting their form, "Thank you" page will appear.

The screenshot shows the customer's view of the "Thank you" page. The page title is "Thanks for submitting the quote request". The content area contains a confirmation message: "Thank you for submitting your quote request. This message is to confirm that you have successfully submitted the quotation form. We'll check your request and get back with the price soon." Below the message is a subscription form with the text "Get our latest news and special sales" and a "SUBSCRIBE" button.

7. General settings

Save message: Enable this option to save messages sent by customers to module back office

Save attachments: Enable this option if you want to save attachments uploaded by customer via the contact form. (Note that enable this may spend a lot of your storage space)

Mark messages from this contact form as "Star message": Automatically "star" (highlight the messages sent via this contact form in the message list by a star) all messages sent via this contact form

Available display position (default Prestashop hooks): If you would like display the contact form via pre-defined Prestashop hooks, just check on the hooks you want

Give access to customer group: Select customer groups who are available to access this contact form.

Only display when customer logged in: Only display this contact form when customer logged in using their registered account.

Activate contact form: Activate or inactivate this contact form

Floating contact form button: Enable this button to display the floating contact form button on the front office. When customers/visitors click on the floating contact form button, the contact form will be displayed via a popup.

You can also customize how the floating contact form button will be displayed on the front office and its display position.

Here is an example of the "floating contact form button" on the homepage:

8. Synchronization

To make your work more convenient, the module allows synchronizing the email list of customers contacted via the contact form with the audience list on Mailchimp.

- First, you need to enable Mailchimp Synchronization.
- Second, enter the Mailchimp API key. (If you don't have a Mailchimp API key, you can follow our detailed instructions by clicking "*How to get Mailchimp API key?*")
- Next, click on the "**SETUP**" button.

After successfully connecting to the API key, the module will allow you to choose an audience list to sync. Now you just need to select the audience list you want then proceeds with mapping data.

The screenshot shows the 'Edit contact form' interface with the following elements:

- Enable Mailchimp synchronization:** A toggle switch is set to 'Yes'. Below it, a note reads: 'By enabling this option, you can sync your subscriber audience to your Mailchimp account'.
- Mailchimp API key:** A text input field contains '951191c-us17'. A 'Check API key' button is to its right.
- How to get Mailchimp API key?:** A 'SETUP' button is present.
- Synchronize with this Mailchimp audience:** A dropdown menu is set to 'Customer list by area'. A pink arrow points to this dropdown, which is open, showing options: '--', 'quangdev', 'Customer list by area', and 'List of buyers by product category'.
- Mapping data table:**

Field label	Field name	Mapping field
Your Name	text-371	First Name
Your email	email-23	Address1
Your phone number	tel-124	Phone Number
Which kind of your meal?	radio-753	-- Do not import --
Quality of food?	menu-518	-- Do not import --
Easy of Ordering?	menu-807	-- Do not import --
Cleanliness?	menu-533	-- Do not import --
Overall Quality?	menu-593	-- Do not import --
Do you have any comment for us?	textarea-185	-- Do not import --

Mapping fields: Address 1, City, Zipcode, State, Country must be selected!

Buttons: 'Cancel' (bottom left), 'Save' (bottom right).

V. DISPLAY CONTACT FORM ON THE FRONTEND

Contact Form Ultimate offers 4 ways to display a contact form on the website's front end:

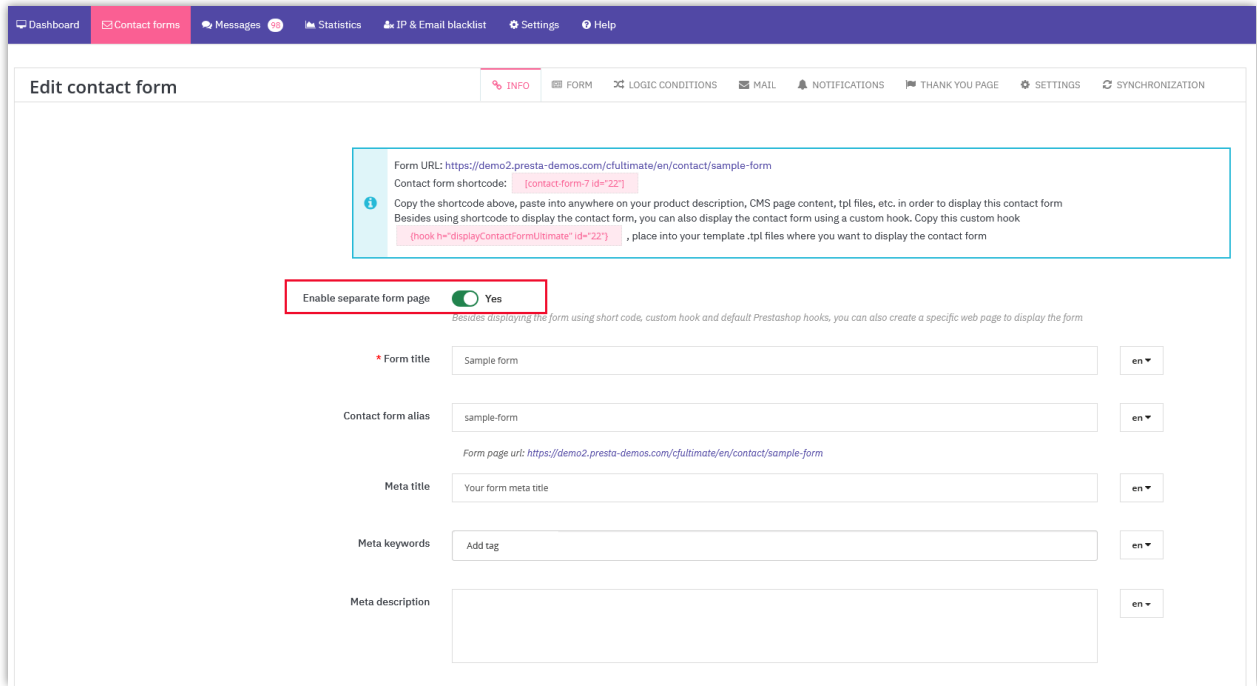

- Display contact form on a separate page (with a friendly URL)
- Display contact form using short code
- Display contact form using custom hook
- Display contact form using pre-defined PrestaShop hooks

1. Display contact form on a separate page

Contact Form Ultimate allows you to create a separate URL to display a contact form. In order to enable this feature, on the "Info" tab, set "Enable separate form page" to "Yes" then enter SEO settings for the page that include meta title, meta description, meta keywords and contact form alias (friendly URL).

The screenshot shows a web interface for configuring a contact form. At the top, there is a breadcrumb trail: "Home / Sample form". Below it, the title "Sample form" is displayed. The form itself is contained within a white box with a light gray border. It features several input fields: "Name" (with a placeholder "Enter your name here"), "Email", "Phone number", and "Your website". There is also an "Attached file" section with a "Choose File" button, the text "No file chosen", and another "Choose file" button. Below the file section, it specifies "Limit size: 5500000 Type files: png | jpg | zip". A large text area labeled "Message" is provided for the user's message. At the bottom left, there is a "Captcha" section with a CAPTCHA image showing the characters "1b63dd" and a refresh button. A blue "SEND" button is located at the bottom right of the form area.

After you successfully save the configuration options, a form page URL will be displayed. You can use that URL in your website menu or anywhere you want customer to see the link to the contact form.

2. Display contact form using shortcode

Shortcode is available for each contact form, the shortcodes are in this format **[contact-form-7 id="CONTACT_FORM_ID"]**. You can also copy the shortcode of each contact form on the contact form list or in the form editing page. Paste the contact form's shortcode anywhere on your CMS page, product description, category description, .tpl file, etc. to display the contact form.

Contact form short code, click to copy

Paste the short code into any text field such as: product description, CMS page content, etc. to display contact form

```

151     {if $product.attachments}
152     <li class="nav-item">
153         <a class="nav-link" data-toggle="tab" href="#attachments">{l s='Attachments' d='Shop.Theme.Catalog'}</a>
154     </li>
155     {/if}
156     {foreach from=$product.extraContent item=extra key=extraKey}
157     <li class="nav-item">
158         <a class="nav-link" data-toggle="tab" href="#extra-{$extraKey}">{$extra.title}</a>
159     </li>
160     {/foreach}
161     [contact-form-7 id="5"]
162     {hook h='productTab' product=$product}
163 </ul>
164
165 <div class="tab-content" id="tab-content">
166 <div class="tab-pane fade in{if $product.description} active{/if}" id="description">
167     {block name='product_description'}
168     <div class="product-description">{$product.description nofilter}</div>
169     {/block}
170 </div>
171 </div>
172
173

```

Paste the shortcode anywhere on template .tpl files to display the contact form

3. Display contact form using custom hook

Besides using short code, you can also use custom hook in this format **{hook h="displayContactForm7" id="CONTACT_FORM_ID"}** to display a contact form like how you do with short code. The only thing different is custom hook can be used in template **.tpl** files only.

INFO FORM LOGIC CONDITIONS MAIL NOTIFICATIONS THANK YOU PAGE SETTINGS SYNCHRONIZATION

Form URL: <http://localhost:8080/prestashop1.7/en/contact/2-sample-form>

Contact form shortcode: `[contact-form-7 id="2"]`

Copy this custom hook

Copy the shortcode above, paste onto anywhere on your product description, CMS page content, tpl files, etc. in order to display this contact form

Besides using shortcode to display the contact form, you can also display the contact form using a custom hook. Copy this custom hook `{hook h="displayContactForm7" id="2"}` place onto your template .tpl files where you want to display the contact form

```

156 {foreach from=$product.extraContent item=extra key=extraKey}
157 <li class="nav-item">
158   <a class="nav-link" data-toggle="tab" href="#extra-{$extraKey}">{$extra.title}</a>
159 </li>
160 {/foreach}
161 {hook h="displayContactForm7" id="5"}
162 {hook h='productTab' product=$product}
163 </ul>
164
165 <div class="tab-content" id="tab-content">
166 <div class="tab-pane fade in{if $product.description} active{/if}" id="description">
167   {block name='product_description'}
168   <div class="product-description">{$product.description nofilter}</div>
169   {/block}
170 </div>
171 </div>
172

```

Paste the custom hook into anywhere on template .tpl files to display contact form

4. Display contact form using pre-defined PrestaShop hook

In order to display the contact form in pre-defined PrestaShop hooks such as header, footer, product page, etc. When you set up the contact form, just check on the positions you want on the "**Available display position**" option.

Available display position (default Prestashop hooks)

<input type="checkbox"/>	Header - top navigation
<input type="checkbox"/>	Header - main header
<input type="checkbox"/>	Top
<input checked="" type="checkbox"/>	Home
<input type="checkbox"/>	Left column
<input type="checkbox"/>	Right column
<input type="checkbox"/>	Footer
<input type="checkbox"/>	Product page - below product images
<input type="checkbox"/>	Product page - Footer
<input checked="" type="checkbox"/>	Checkout page
<input checked="" type="checkbox"/>	Login page

Besides using short code, custom hook and a separated page to display the contact form, you can also display contact form on default Prestashop pre-defined hooks

VI. MANAGE MESSAGES

Along with sending messages via email, **Contact Form Ultimate** also allows you to save messages sent via contact forms to your website back office.

In order to save messages sent by customers via a contact form, in the form's configuration section set "**Save message**" to "**Yes**", you can also enable "**Save attachments**" if you would like to save attached files on your server.

Edit contact form

INFO FORM LOGIC CONDITIONS MAIL NOTIFICATIONS THANK YOU PAGE **SETTINGS** SYNCHRONIZATION

i To enable shortcode feature for contact form and display contact form on PrestaShop hooks, please turn on "Enable shortcode for contact form and display contact form in PrestaShop hook" option on [Setting page](#)

Activate contact form Yes

Save messages Yes
Save customer messages to "Messages" tab.

Save attachments Yes
Save attached files on your server, you can download the files in "Messages" tab. Enable this option is useful but it will take some of your hosting disk space to store the files. You can set this to "No" if it is not necessary for saving files on server because the files will be also sent to your email inbox

NOTE:

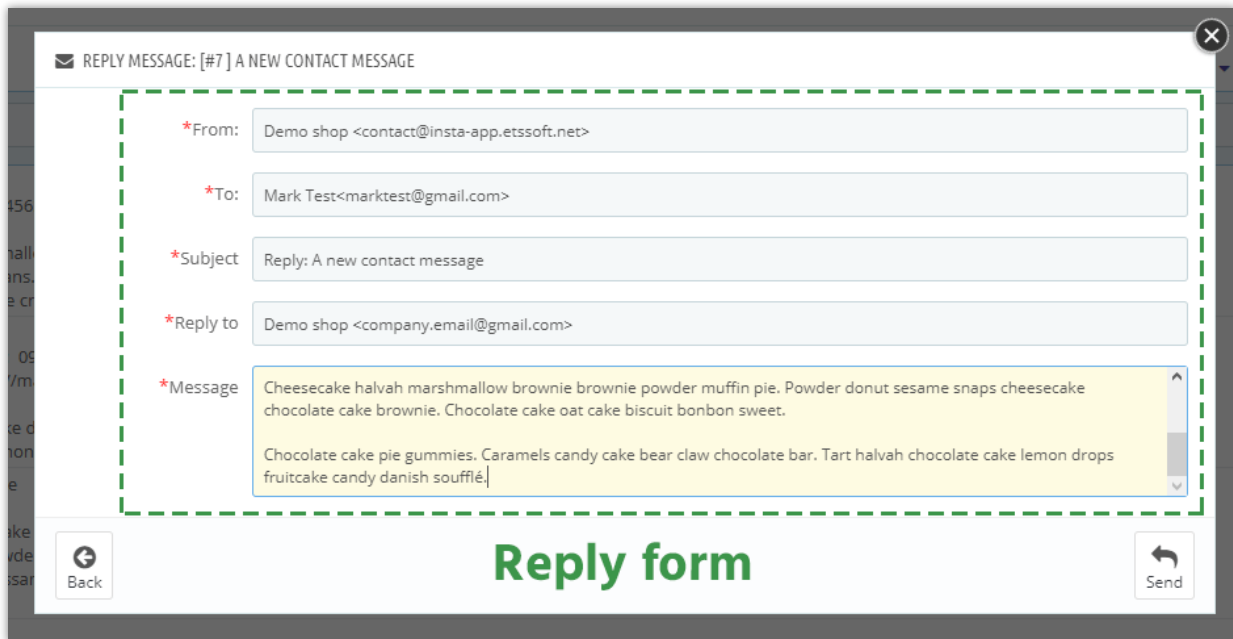

Save attachments on server may cost lot of your hosting storage. Attached files sent by customers will be sent to you via email, so if it's not necessary, don't save attachments.

To view messages sent by your customers, navigate to "**Messages**" tab. In the back office, you can view and manage the messages easily with a professional message management tool which provides a lot of helpful features such as message filter, mark messages as "**Read**" or "**Unread**", star a message, bulk actions, reply a message, export messages to **.csv** file, etc.

Export messages to .csv file

VII. SETTINGS

1. Email templates

Contact Form Ultimate allows you to customize “Email to admin” template, “Auto responder” template and “Reply email” template in the way you want.

Enable email template YES NO
Disable this option if you would like to send simple email without HTML/CSS styles

* Mail to admin

<> A **B** *I* U Paragraph ▾ en ▾

Available short codes: {shop_name} , {shop_logo} , {message_content} , {shop_url}

2. Import / Export

This feature allows you to back up all contact forms' configuration and restore the contact forms anytime you want. This also helps you copy contact forms quickly from website to website.

EXPORT CONTACT FORMS	IMPORT CONTACT FORMS
<p>Export form configurations of all contact forms of the current shop that you are viewing</p> <p>Export contact forms</p>	<p>Import contact forms to the current shop that you are viewing for quick configuration. This is useful when you want to migrate contact forms between websites</p> <p>Data file</p> <p>Choose File No file chosen</p> <p><input type="checkbox"/> Delete all contact forms before importing</p> <p><input type="checkbox"/> Override all forms with the same IDs</p> <p>Import contact forms</p>

3. Integration

In the integration section, you can set up contact forms' general settings and reCAPTCHA.

In your website back office, navigate to "**Settings > Integration**"

a. Global settings

On the "Global settings" you can set up general rules for all contact forms (form title, enable URL suffix) and the number of messages displayed per page in the back office.

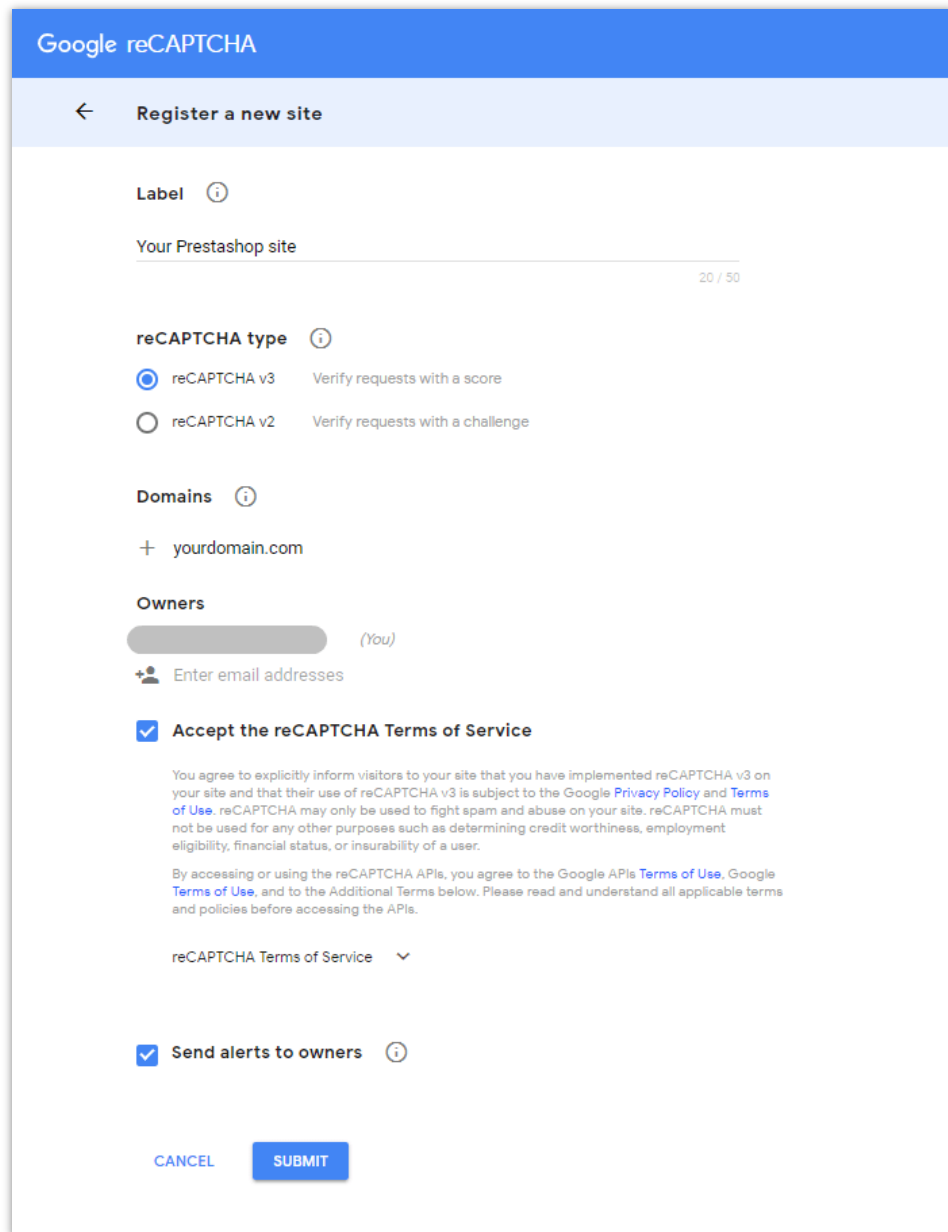

b. reCAPTCHA

Contact Form Ultimate supports both reCAPTCHA v2 and reCAPTCHA v3. To get started with reCAPTCHA, you need a Google account and to register your site for an API key pair.

Step 1: Go to [Google's reCAPTCHA admin page](#).

Step 2: Register your site.

- Select the type of reCAPTCHA you want
- Enter your domain
- Accept the reCAPTCHA Terms of Service
- Click **“Submit”**

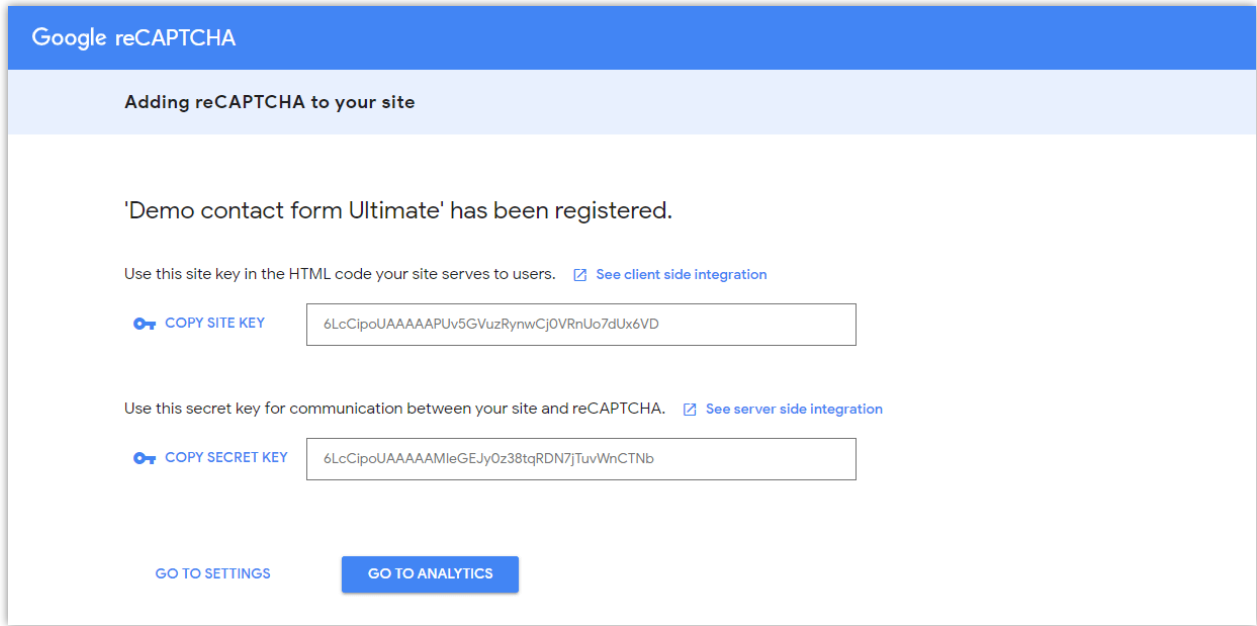

The screenshot shows the Google reCAPTCHA registration interface. At the top, there is a blue header with the text "Google reCAPTCHA". Below the header is a light blue bar with a back arrow and the text "Register a new site".

The main content area is white and contains several sections:

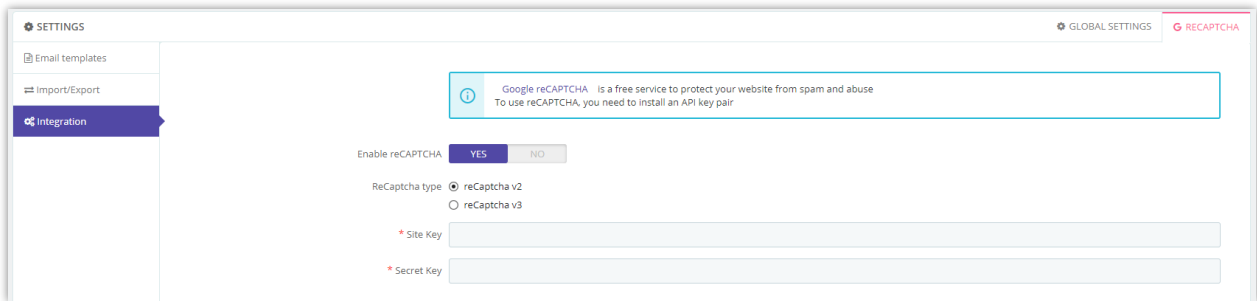

- Label**: A text input field with the placeholder "Your Prestashop site" and a character count "20 / 50".
- reCAPTCHA type**: Two radio button options: "reCAPTCHA v3" (selected) with the description "Verify requests with a score", and "reCAPTCHA v2" with the description "Verify requests with a challenge".
- Domains**: A text input field with the placeholder "+ yourdomain.com".
- Owners**: A list of owners with a placeholder "(You)" and a button to "Enter email addresses".
- Accept the reCAPTCHA Terms of Service**: A checked checkbox followed by a paragraph of legal text and a dropdown menu for "reCAPTCHA Terms of Service".
- Send alerts to owners**: A checked checkbox with an information icon.

At the bottom, there are two buttons: "CANCEL" and "SUBMIT".

Step 3: Get a site key and secret key

Step 4: Navigate to **Settings > Integration > reCAPTCHA** subtab. Enable reCAPTCHA feature then enter your site key and secret key.

Click "Save" to finish.

VIII. IP AND EMAIL BLACKLIST

With **Contact Form Ultimate**, you can enter IP addresses and email addresses of spammers and ban them from submitting your forms.

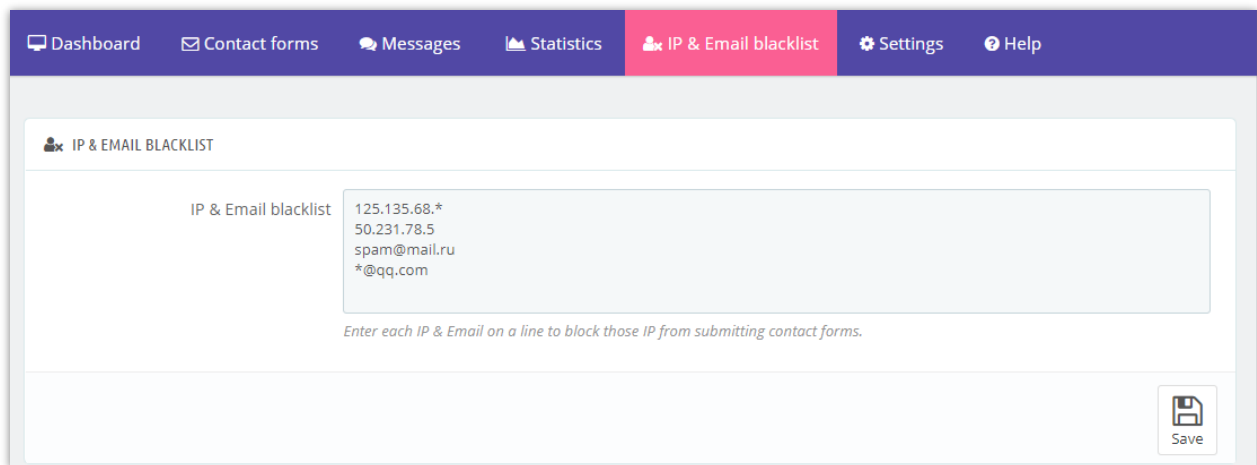

You may enter the exact IP address (for example: 69.89.31.226) or an IP pattern using "*" character, each IP/IP pattern on one line.

NOTE:

IP pattern is a way to represent an IP address range. You can replace one or several octets of IP address with "" character. For example, if you enter this IP pattern: 69.89.31.*, **Contact Form Ultimate** will ban all IP addresses from 69.89.31.0 to 69.89.31.255*

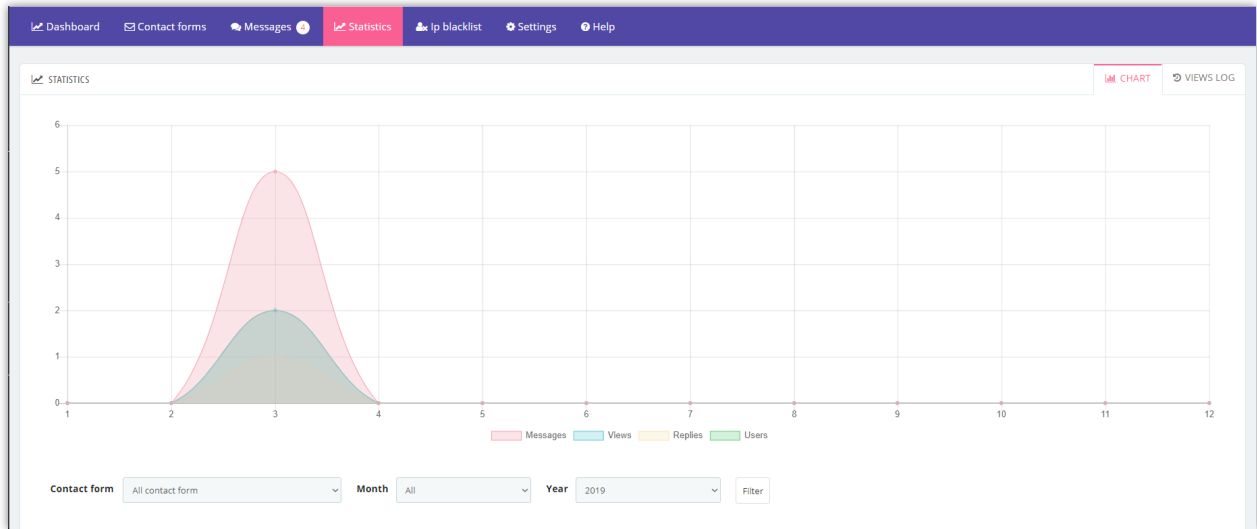

Similar to banning IP addresses, you can enter the exact email address or email pattern using "*" character, each email or email pattern on a line.

For example, if you enter *@mail.ru email pattern, **Contact Form Ultimate** will ban all emails which are sent from users having "@mail.ru" on their email addresses.

IX. STATISTIC

In this tab, you can see a statistic chart of messages, views and replies received through your contact forms.

At the bottom of **“Chart”** tab, you can select some conditions to filter the chart like: contact form name, month and year.

From **“Views log”** tab, you can see the information of the customers who sent messages via contact forms.

The screenshot shows a dashboard with a navigation bar at the top containing 'Dashboard', 'Contact forms', 'Messages', 'Statistics', 'Ip blacklist', 'Settings', and 'Help'. The 'Views Log' section is active, displaying a table with the following data:

IP address	Browser	Customer	Contact form	Date	Action
:::1	Opera 58.0.3135.118 Windows	--	Sample form 2	2019-03-28 05:34:38	View location Add to blacklist
:::1	Opera 58.0.3135.118 Windows	Freya Nguyen	Sample form	2019-03-28 05:02:00	View location Add to blacklist

Showing 1 to 2 of 2 (1 Page(s))

Clear all view logs

- You can add any customer’s IP address into IP blacklist by clicking **“Add to blacklist”** button.
- **“View location”** button will navigate you to an info page with your customer correct location.

X. DASHBOARD

The dashboard is divided into three main sections:

- CONTACT MANAGEMENT:** A grid of eight icons for Contact Forms, Messages, Email Templates, Import/Export, Integration, Statistics, IP blacklist, and Help. Below this grid is the text "Quick navigate to configuration tabs".
- CONTACT TRAFFIC:** A chart showing statistics for Messages, Views, Replies, and Users over a 12-day period. It includes a "Last visits" log with two entries: "Opera 58.0.3135.118 Windows" at "2019-03-28 05:34:38" and "2019-03-28 05:02:00". Below the chart is the text "Contact traffic chart and visit log".
- Module activities overview:** A row of five activity cards: "6 From 2 form Messages received", "0 0% Replied messages", "4 67% Unread messages", "6 0 registered Users contacted", and "2 All enabled Contact forms". Each card has a "View more" link.

XI. THANK YOU

Thank you again for purchasing our product and going through this documentation. We hope this document is helpful and efficient in the complete setup of this module on your website.

If you do have any questions for which the answer is not available in this document, please feel free to contact us.
